The first two chapters are intended to get the reader familiar with the user interface as well as the most common menu tools and commands that are required to work effectively with AutoCAD 2013. By the end of chapter two the student will be excited and prepared to take on a much larger project. Throughout the rest of the book the student develops the campus library. Using step by step tutorial lessons the library project is followed through to create FFE plans, interior elevations, schedules and details. After completing this book you will have a well rounded knowledge of Computer Aided Drafting that can be used in the industry and the satisfaction of having completed a set of residential drawings. This textbook starts with an optional section that covers basic hand sketching techniques and concepts intended to increase your ability to sketch design ideas by hand and to think three dimensionally. The book then proceeds with a basic introduction to AutoCAD 2013. The first three chapters are intended to get you familiar with the user interface and many of the common menus and tools. Throughout the rest of the book you will design a residence through to its completion. Using step by step tutorial lessons the residential project is followed through to create elevations, sections, details etc. Throughout the project new AutoCAD commands are covered at the appropriate time. Focus is placed on the most essential parts of a command rather than an exhaustive review of every sub feature of a particular command. The Appendix contains a bonus section covering the fundamental principles of engineering graphics that relate to architecture.
