

2. Slip the element off the wire mesh guide.

3. Wash the element gently, but thoroughly, in solvent.
4. Squeeze excess solvent out of element and dry.
5. Pour a small quantity of 30W motor oil onto cleaner element and work thoroughly into the porous foam material. Element must be damp with oil but not dripping.
6. Re-insert the wire mesh cleaner element guide into the element.
7. Coat the upper and lower edges of the cleaner element with lube grease. (This will provide an air-tight seal between the cleaner case cover and cleaner seat.)
8. Re-install the element assembly, case cover and seat.

NOTE:

Each time cleaner element maintenance is performed, check the air inlet to the cleaner case for obstructions. Check the air cleaner joint rubber to the carburetor and manifold fittings for an air-tight seal. Tighten all fittings thoroughly to avoid the possibility of unfiltered air entering the engine.

CAUTION:

Never operate the engine with the air cleaner element removed. This will allow unfiltered air to enter, causing rapid wear and possible engine damage. Additionally, operation without the cleaner element will affect carburetor jetting with subsequent poor performance and possible engine overheating.
