Answer the following questions. Provide a punnett square to support your answers where indicated. Express probabilities as percentages.

1. Explain the difference between incomplete dominance and codominance:

Incomplete = both alleles are expressed and the phenotype is a "blend"

Codominance = both alleles are expressed and the phenotype is a mixture or patches of both of them

2. In some chickens, the gene for feather color is controlled by codominance. The allele for black is B and the allele for white is W. The heterozygous phenotype is known as erminette.

a. What is the genotype for black chickens? BB

b. What is the genotype for white chickens? WW

c. What is the genotype for erminette chickens? BW

3. If two erminette chickens were crossed, what is the probability that: (use a Punnett square)

- a. They would have a black chick? = 25%

	B	W
B	BB	BW
W	BW	WW

50% of the offspring have genotype BW, 25% are BB, and 25% are WW. This means that 50% of the offspring are erminette, 25% are black, and 25% are white.

- b. They would have a white chick? =25%

(see above punnet square)
