S. Government, 2009-03-02 Using the analytic techniques contained in this primer will assist analysts in dealing with the perennial problems of intelligence the complexity of international developments incomplete and ambiguous information and the inherent limitations of the human mind Understanding the intentions and capabilities of adversaries and other foreign actors is challenging especially when either or both are concealed Moreover transnational threats today pose even greater complexity in that they involve multiple actors including nonstate entities that can adapt and transform themselves faster than those who seek to monitor and contain them Finally globalization has increased the diversity of outcomes when complex interactive systems such as financial flows regional economies or the international system as a whole are in flux The first hurdle for analysts is identifying the relevant and diagnostic information from the increasing volume of ambiguous and contradictory data that is acquired through open source and clandestine means Analysts must also pierce the shroud of secrecy and sometimes deception that state and nonstate actors use to mislead A systematic approach that considers a range of alternative explanations and outcomes offers one way to ensure that analysts do not dismiss potentially relevant hypotheses and supporting information resulting in missed opportunities to warn Cognitive and perceptual biases in human perception and judgment are another important reason for analysts to consider alternatives As Richards Heuer and others have argued all individuals assimilate and evaluate information through the medium of mental models sometimes also called frames or mind sets These are experience based constructs of assumptions and expectations both about the world in general and more specific domains These constructs strongly influence what information analysts will accept that is data that are in accordance with analysts unconscious mental models are more likely to be perceived and

remembered than information that is at odds with them Mental models are critical to allowing individuals to process what otherwise would be an incomprehensible volume of information Yet they can cause analysts to overlook reject or forget important incoming or missing information that is not in accord with their assumptions and expectations Seasoned analysts may be more susceptible to these mind set problems as a result of their expertise and past success in using time tested mental models The key risks of mind sets are that analysts perceive what they expect to perceive once formed they are resistant to change new information is assimilated sometimes erroneously into existing mental models and conflicting information is often dismissed or ignored

A Tradecraft Primer: Structured Analytic Techniques for Improving Intelligence Analysis - Cognitive and Perceptual Biases, Reasoning Processes Central Intelligence Agency (CIA),2016-12-11 This primer highlights structured analytic techniques some widely used in the private sector and academia some unique to the intelligence profession It is not a comprehensive overview of how intelligence officers conduct analysis Rather the primer highlights how structured analytic techniques can help one challenge judgments identify mental mindsets stimulate creativity and manage uncertainty In short incorporating regular use of techniques such as these can enable one to structure thinking for wrestling with difficult questions Using the analytic techniques contained in this primer will assist analysts in dealing with the perennial problems of intelligence the complexity of international developments incomplete and ambiguous information and the inherent limitations of the human mind Understanding the intentions and capabilities of adversaries and other foreign actors is challenging especially when either or both are concealed Moreover transnational threats today pose even greater complexity in that they involve multiple actors including nonstate entities that can adapt and transform themselves faster than those who seek to monitor and contain them Finally globalization has increased the diversity of outcomes when complex interactive systems such as financial flows regional economies or the international system as a whole are in flux The first hurdle for analysts is identifying the relevant and diagnostic information from the increasing

volume of ambiguous and contradictory data that is acquired through open source and clandestine means Analysts must also pierce the shroud of secrecy and sometimes deception that state and nonstate actors use to mislead A systematic approach that considers a range of alternative explanations and outcomes offers one way to ensure that analysts do not dismiss potentially relevant hypotheses and supporting information resulting in missed opportunities to warn Cognitive and perceptual biases in human perception and judgment are another important reason for analysts to consider alternatives As Richards Heuer and others have argued all individuals assimilate and evaluate information through the medium of mental models sometimes also called frames or mind sets These are experience based constructs of assumptions and expectations both about the world in general and more specific domains These constructs strongly influence what information analysts will accept that is data that are in accordance with analysts unconscious mental models are more likely to be perceived and remembered than information that is at odds with them Mental models are critical to allowing individuals to process what otherwise would be an incomprehensible volume of information Yet they can cause analysts to overlook reject or forget important incoming or missing information that is not in accord with their assumptions and expectations Seasoned analysts may be more susceptible to these mind set problems as a result of their expertise and past success in using time tested mental models The key risks of mindsets are that analysts perceive what they expect to perceive once formed they are resistant to change new information is assimilated sometimes erroneously into existing mental models and conflicting information is often dismissed or ignored Intelligence analysts should be self conscious about their reasoning processes They should think about how they make judgments and reach conclusions not just about the judgments and conclusions themselves

Intelligence Analysis Fundamentals Godfrey Garner,Patrick McGlynn,2018-08-06 There are a limited number of intelligence analysis books available on the market Intelligence Analysis Fundamentals is an introductory accessible text for college level undergraduate and graduate level courses While the principles outlined in the book largely follow military intelligence terminology and practice concepts are presented to correlate with intelligence gathering and analysis performed in law enforcement homeland security and corporate and business security roles Most of the existing texts on intelligence gathering and analysis focus on specific types of intelligence such as target centric intelligence and many of these detail information from a position of prior knowledge In other words they are most valuable to the consumer who has a working level knowledge of the subject The book is general enough in nature that a lay student interested in pursuing a career in intelligence Homeland Security or other related areas of law enforcement will benefit from it No prior knowledge of intelligence analysis functions or operations is assumed Chapters illustrate methods and techniques that over the years have consistently demonstrate results superior to those achieved with other means Chapters describe such analytical methods that are most widely used in the intelligence community and serve as recognized standards and benchmarks in the practice of intelligence analysis All techniques have been selected for inclusion for their specific application to homeland security

As current and active members of the intelligence community the authors draw on their decades of experience in intelligence to offer real world examples to illustrate concepts. All methodologies reflect the latest trends in the intelligence communities assessment analysis and reporting processes with all presented being open source non classified information. Intelligence Analysis for Tomorrow National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Behavioral and Social Science Research to Improve Intelligence Analysis for National Security, 2011-04-08 The intelligence community IC plays an essential role in the national security of the United States Decision makers rely on IC analyses and predictions to reduce uncertainty and to provide warnings about everything from international diplomatic relations to overseas conflicts In today's complex and rapidly changing world it is more important

than ever that analytic products be accurate and timely Recognizing that need the IC has been actively seeking ways to improve its performance and expand its capabilities In 2008 the Office of the Director of National Intelligence ODNI asked the National Research Council NRC to establish a committee to synthesize and assess evidence from the behavioral and social sciences relevant to analytic methods and their potential application for the U S intelligence community In Intelligence Analysis for Tomorrow Advances from the Behavioral and Social Sciences the NRC offers the Director of National Intelligence DNI recommendations to address many of the IC's challenges Intelligence Analysis for Tomorrow asserts that one of the most important things that the IC can learn from the behavioral and social sciences is how to characterize and evaluate its analytic assumptions methods technologies and management practices Behavioral and social scientific knowledge can help the IC to understand and improve all phases of the analytic cycle how to recruit select train and motivate analysts how to master and deploy the most suitable analytic methods how to organize the day to day work of analysts as individuals and teams and how to communicate with its customers The report makes five broad recommendations which offer practical ways to apply the behavioral and social sciences which will bring the IC substantial immediate and longer term benefits with modest costs and minimal disruption

Restructuring Structured Analytic Techniques in Intelligence

,2017 Structured analytic techniques SATs are intended to improve intelligence analysis by checking the two canonical sources of error systematic biases and random noise Although both goals are achievable no one knows how close the current generation of SATs comes to achieving either of them We identify two root problems 1 SATs treat bipolar biases as unipolar As a result we lack metrics for gauging possible over shooting and have no way of knowing when SATs that focus on suppressing one bias e g overconfidence are triggering the opposing bias e g under confidence 2 SATs tacitly assume that problem decomposition e g breaking reasoning into rows and columns of matrices corresponding to hypotheses and evidence is a sound means of reducing noise in assessments But no one has ever actually tested whether decomposition is adding or subtracting noise from the analytic process and there are good reasons for suspecting that decomposition will on balance degrade the reliability of analytic judgment The central shortcoming is that SATs have not been subject to sustained scientific of the sort that could reveal when they are helping or harming the cause of delivering accurate assessments of the world to the policy community
