A View From The Top Student Mathematical Library:

A View from the Top Alex Iosevich, 2007 *Handbook of the History and Philosophy of Mathematical Practice* Bharath Sriraman, 2024-04-26 The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of mathematical practice to the present. It aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed. Each section offers insights into the origins, debates, methodologies, and newer perspectives that characterize the discipline today. Contributions are written by scholars from mathematics history and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today. Who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy. Editorial Advisory Board: Andrew Aberdein (Florida Institute of Technology, USA), Jody Azzouni (Tufts University, USA), Otávio Bueno (University of Miami, USA), William Byers (Concordia University, Canada), Carlo Cellucci (Sapienza University of Rome, Italy), Chandler Davis (University of Toronto, Canada), 1926-2022, Paul Ernest (University of Exeter, UK), Michele Friend (George Washington University, USA), Reuben Hersh (University of New Mexico, USA), 1927-2020, Kyeong Hwa Lee (Seoul National University, South Korea), Yuri Manin (Max Planck Institute for Mathematics, Germany), 1937-2023, Athanase Papadopoulos (University of Strasbourg, France), Ulf Persson (Chalmers University of Technology, Sweden), John Stillwell (University of San Francisco, USA), David Tall (University of Warwick, UK), 1941-2024. This book, with its exciting depth and breadth, illuminates us about the history, practice, and the very language of our subject about the role of abstraction, proof, and manners of proof about the interplay of fundamental intuitions about algebraic thought in contrast to geometric thought. The richness of mathematics and the philosophy encompassing it is splendidly exhibited over the wide range of time these volumes cover, from deep Platonic and Neoplatonic influences to the most current experimental approaches. Enriched as well with vivid biographies and brilliant personal essays written by and about people who play an important role in our tradition, this extraordinary collection of essays is fittingly dedicated to the memory of Chandler Davis, Reuben Hersh, and Yuri Manin. Barry Mazur (Harvard University, Professor Emeritus), Gerhard Gade (Harvard University, Professor Emeritus). This encyclopedic Handbook will be a treat for all those interested in the history and philosophy of mathematics. Whether one is interested in individuals from Pythagoras through Newton and Leibniz to Grothendieck, fields, geometry, algebra, number theory, logic, probability, analysis, viewpoints from Platonism to Intuitionism, or methods of proof, experiment, computer assistance, the reader will find a multitude of chapters that inform and fascinate. John Stillwell (University of San Francisco, Professor Emeritus), Recipient of the 2005 Chauvenet Prize. Dedicating a volume to the memory of three mathematicians, Chandler Davis, Reuben Hersh, and Yuri Manin, who went out of their way to show to a broader audience that mathematics is more than what they might think, is an excellent initiative. Gathering authors coming from many different backgrounds but who are very strict about the essays they write was

successfully achieved by the editor in chief The result a great source of potential inspiration Jean Pierre Bourguignon Nicolaas Kuiper Honorary Professor at the Institut des Hautes tudes Scientifiques [The Finite Field Distance Problem](#) David J. Covert,2021-06-21 Erdős asked how many distinct distances must there be in a set of n points in the plane Falconer asked a continuous analogue essentially asking what is the minimal Hausdorff dimension required of a compact set in order to guarantee that the set of distinct distances has positive Lebesgue measure in \mathbb{R}^2 The finite field distance problem poses the analogous question in a vector space over a finite field The problem is relatively new but remains tantalizingly out of reach This book provides an accessible exciting summary of known results The tools used range over combinatorics number theory analysis and algebra The intended audience is graduate students and advanced undergraduates interested in investigating the unknown dimensions of the problem Results available until now only in the research literature are clearly explained and beautifully motivated A concluding chapter opens up connections to related topics in combinatorics and number theory incidence theory sum product phenomena Waring's problem and the Kakeya conjecture [Gazette - Australian Mathematical Society](#) Australian Mathematical Society,2007 [Convexity from the Geometric Point of View](#) Vitor Balestro,Horst Martini,Ralph Teixeira,2024-07-14 This text gives a comprehensive introduction to the common core of convex geometry Basic concepts and tools which are present in all branches of that field are presented with a highly didactic approach Mainly directed to graduate and advanced undergraduates the book is self contained in such a way that it can be read by anyone who has standard undergraduate knowledge of analysis and of linear algebra Additionally it can be used as a single reference for a complete introduction to convex geometry and the content coverage is sufficiently broad that the reader may gain a glimpse of the entire breadth of the field and various subfields The book is suitable as a primary text for courses in convex geometry and also in discrete geometry including polytopes It is also appropriate for survey type courses in Banach space theory convex analysis differential geometry and applications of measure theory Solutions to all exercises are available to instructors who adopt the text for coursework Most chapters use the same structure with the first part presenting theory and the next containing a healthy range of exercises Some of the exercises may even be considered as short introductions to ideas which are not covered in the theory portion Each chapter has a notes section offering a rich narrative to accompany the theory illuminating the development of ideas and providing overviews to the literature concerning the covered topics In most cases these notes bring the reader to the research front The text includes many figures that illustrate concepts and some parts of the proofs enabling the reader to have a better understanding of the geometric meaning of the ideas An appendix containing basic and geometric measure theory collects useful information for convex geometers [Choice](#) ,2008 [Best Educational Internet Sites for Science and Math Students](#) Victoria Chase,Heidi Frederick,Karen Hollingsworth,Edward W.
