**America on Foot** Kerry Segrave, 2006-03-15 Hippocrates one of history's earliest known physicians once asserted Walking is man's best medicine Over the last three centuries people have endorsed walking for a variety of reasons health among them Before the 1700s people walked as an essential part of their lifestyle With the coming of the transportation revolution and the advent of such conveyances as horse drawn coaches railways and automobiles walking became something that was done increasingly out of choice rather than necessity England's fashionable society engaged in afternoon promenades as a stylish fad While America's vast distances and sparse settlements made this activity impractical Americans nevertheless took to walking in other ways including engaging in long distance walking competitions complete with spectators and prize money Thus for most of the twentieth century the activity of walking was much more than a means of transportation Beginning with the history of walking as a social activity the book discusses the various issues which have affected walkers including increased automobile traffic the attention of the marketing industry and pedestrian regulations The work examines the contemplative psychological and observational qualities of walking as well as famous personalities including Leonardo da Vinci William Shakespeare John Keats and John James Audubon who endorsed these intellectual qualifications During the 1970s fitness boom walking was reinvented yet

again becoming an activity of numbers and equations as participants fought to maximize health benefits The book concludes with a legal analysis of pedestrianism as it relates to sharing space with the automobile The cruise of her majesty's ship 'Bacchante' 1879-1882, compiled from the private journals, letters and note-books of prince Albert Victor and prince George of Wales, with additions by J.N. Dalton Prince Albert Victor (Duke of Clarence and Avondale),1886 **Operative Mapping** Roger Paez,2024-01-22 Operative Mapping investigates the use of maps as a design tool providing insight with the potential to benefit education and practice in the design disciplines The book s fundamental aim is to offer a methodological contribution to the design disciplines both in conceptual and instrumental terms When added to the resources of contemporary design operative mapping overcomes the analytical and strictly instrumental approaches of maps opening up the possibility of working both pragmatically and critically by acknowledging the need for an effective transformation of the milieu based on an understanding of pre existing conditions The approach is pragmatic not only discussing the present but above all generating a toolbox to help expand on the objectives methodologies and formats of design in the immediate future The book joins together a review of the theoretical body of work on mapping from the social sciences with case studies from the past 30 years in architecture planning and landscape design in the interest of linking past practices with future ones
