Code for most web sites mostly runs on the server. When a user clicks on a link the site reacts slowly because the browser sends information to the server and the server sends it back again before displaying the results. With near universal availability of capable browsers and powerful hardware the single page web application SPA pushes most of the code to the browser giving users immediate results whether they're surfing at their desk or using a phone app. Single Page Web Applications shows how to build modern browser based apps that take advantage of stronger client platforms and more predictable bandwidth. It covers the SPA design approach and explores new techniques like structured JavaScript and responsive design. Readers will learn to capitalize on trends like server side JavaScript and NoSQL data stores as well as new frameworks that make JavaScript more manageable and testable as a first class language. AUDIENCE: This book is for web developers, architects and product managers who know about JavaScript, HTML, CSS and web development basics. ABOUT THE TECHNOLOGY: A Single Page Application SPA is an application delivered to the browser that does not reload the page during use. **Beginning JavaScript and CSS Development with jQuery** Richard York, 2011-02-09. This book covers the jQuery JavaScript framework and the jQuery UI JavaScript framework to get more results faster out of JavaScript programming. The author covers each method exposed by jQuery's API which contains methods to resolve common redundant tasks in less code. You will also learn how jQuery eliminates certain cross browser cross platform development headaches like the event model. In addition to giving you the ability to simulate events this book also helps simplify your work with events by reducing the amount of code that you need to write to attach events.
