## READING COMPREHENSION WORKSHEET

<p>Fill in the blank with the correct word or phrase.</p> <p>62. The equation that relates force, mass, and acceleration is <math>F = ma</math>.</p> <p>63. When multiple forces act on the same object, their <u>net force</u> is the sum of all the forces.</p> <p>64. The forces that oppose motion between two surfaces in contact are <u>friction</u>.</p> <p>65. The intensity of a force must multiply an object's velocity to calculate its <u>momentum</u>.</p> <p>66. When multiple forces act on an object, they combine to produce a net force, which determines whether the object speeds up, slows down, or changes direction. Understanding how forces work is essential to explaining everyday phenomena, from a person walking to a rocket launching into space.</p> <p>It explains the relationship between force, mass, and acceleration as described by Newton's second law, which states that the net force acting on an object results in its acceleration (<math>F = ma</math>). The more force applied to an object, the greater its acceleration, provided the mass stays constant. Alternatively, for a given force, an increase in mass results in a decrease in acceleration.</p> <p>Force also determines the direction of the resulting motion. For example, pushing a cart with a small weight makes it accelerate quickly, while pushing a heavier cart results in a slower acceleration. Friction, a type of opposing force, acts to slow down motion by opposing the applied force. When multiple forces act on an object, the net force determines the resulting motion. For example, a car moving forward while a person pushes it from behind will result in a faster acceleration than if only the car's engine were pushing it forward.</p> <p>Search and select the correct answer for each question.</p> <p>1. What happens when the net force on an object is zero?</p> <p>2. What happens when the net force on an object is zero?</p> <p>3. What happens when the net force on an object is zero?</p> <p>4.
