Dynamic Programming Eric V. Denardo, 2012-12-27 Designed both for those who seek an acquaintance with dynamic programming and for those wishing to become experts this text is accessible to anyone who has taken a course in operations research It starts with a basic introduction to sequential decision processes and proceeds to the use of dynamic programming in studying models of resource allocation Subsequent topics include methods for approximating solutions of control problems in continuous time production control decision making in the face of an uncertain future and inventory control models The final chapter introduces sequential decision processes that lack fixed planning horizons and the supplementary chapters treat data structures and the basic properties of convex functions 1982 edition Preface to the Dover Edition *Dynamic Programming* Art Lew, Holger Mauch, 2006-10-05 This book provides a practical introduction to computationally solving discrete optimization problems using dynamic programming From the examples presented readers should more easily be able to formulate dynamic programming solutions to their own problems of interest We also provide and describe the design implementation and use of a software tool that has been used to numerically solve all of the problems presented earlier in the book **Algorithm Design with Haskell** Richard Bird, Jeremy Gibbons, 2020-07-09 Ideal for learning or reference this book explains the five main principles of algorithm design and their implementation in Haskell *Hybrid Systems: Computation and Control* Claire J. Tomlin, Mark R. compares ideally rational and the naturalist approach used by this book which focuses on how actual agents chose their strategies and the effects of these strategies on model systems Part II explores a number of basic games using models in which agents have fixed strategies This section draws heavily on the substantial literature associated with the relevant application areas in the social sciences Part III reviews core results and applications of agent based models in which strategic interaction is present and for which design issues have genuine practical import This section draws heavily on the substantial literature associated with the application area to hand Part IV addresses miscellaneous topics in strategic interaction including lying in negotiations reasoning by backward induction and evolutionary models Modelled after the authors Agents Games and Evolution course at the University of Pennsylvania this book keeps mathematics to a minimum focusing on computational strategies and useful methods for dealing with a variety of situations
