Autonomous Underwater Vehicles Modeling Control Design And Simulation:

Autonomous Underwater Vehicles Sabiha Wadoo,Pushkin Kachroo,2017-12-19 Underwater vehicles present some difficult and very particular control system design problems These are often the result of nonlinear dynamics and uncertain models as well as the presence of sometimes unforeseeable environmental disturbances that are difficult to measure or estimate Autonomous Underwater Vehicles Modeling Control Design and Simulation outlines a novel approach to help readers develop models to simulate feedback controllers for motion planning and design The book combines useful information on both kinematic and dynamic nonlinear feedback control models providing simulation results and other essential information giving readers a truly unique and all encompassing new perspective on design Includes MATLAB Simulations to Illustrate Concepts and Enhance Understanding Starting with an introductory overview the book offers examples of underwater vehicle construction exploring kinematic fundamentals problem formulation and controllability among other key topics Particularly valuable to researchers is the book's detailed coverage of mathematical analysis as it applies to controllability motion planning feedback modeling and other concepts involved in nonlinear control design Throughout the authors reinforce the implicit goal in underwater vehicle design to stabilize and make the vehicle follow a trajectory precisely Fundamentally nonlinear in nature the dynamics of AUVs present a difficult control system design problem which cannot be easily accommodated by traditional linear design methodologies The results presented here can be extended to obtain advanced control strategies and design schemes not only for autonomous underwater vehicles but also for other similar problems in the area of nonlinear control

Autonomous Underwater Vehicles Martin Azese,Mohammed Bouchahdane,2025 Fundamentals of Autonomous Underwater Vehicles AUVs Introduce AUV basics including their purpose structure types and common applications in marine exploration environmental monitoring and defense Dynamic Modeling of AUVs Discuss the development of mathematical models to represent the motion and dynamics of AUVs in complex underwater environments accounting for forces such as buoyancy drag and hydrodynamics Control Systems for AUVs Explore control design techniques including PID controllers adaptive control and nonlinear control used to regulate AUV motion depth and trajectory for precise navigation Navigation and Guidance Examine navigation methods such as inertial navigation acoustic positioning and GPS integration as well as guidance algorithms like path planning and obstacle avoidance crucial for autonomous operations Simulation of AUV Performance Discuss the role of simulation tools and software e g MATLAB Simulink in testing and evaluating AUV models control systems and mission scenarios in a virtual environment before deployment Environmental Interaction and Adaptation Address challenges related to the AUV's interaction with dynamic ocean environments including currents variable water conditions and adapting control systems to handle environmental uncertainties

Benchmark Models of Control System Design for Remotely Operated Vehicles Cheng Siong Chin,Michael Wai Shing

Lau,2020-08-07 This book is intended to meet the needs of those who seek to develop control systems for ROVs when there is no model available during the initial design stage The modeling simulation and application of marine vehicles like underwater robotic vehicles URVs are multidisciplinary and combine mathematical aspects from various engineering disciplines URVs such as remotely operated vehicle ROVs are used for a wide range of applications such as exploring the extreme depths of our ocean where a hard wired link is still required Most ROVs operate in extreme environments with uncertainties in the model prior to control system design However the method involved extensive testing before the system model could be used for any control actions It has been found that the range of error can be extensive and uncertain in actual continuously varying conditions Hence it is important to address the problem of reliance on model testing using different modeling approaches In this book approaches such as WAMIT ANSYS CFX STAR CCM MATLAB and Simulink are used to model parameters for ROVs A few benchmark models are provided allowing researchers and students to explore and test different control schemes Given its scope the book offers a valuable reference guide for postgraduate and undergraduate students engaged in modeling and simulation for ROV control
