Aashto Roadside Design Guide:

Roadside Design Guide American Association of State Highway and Transportation Officials. Task Force for Roadside Safety, 2011 The Roadside Design Guide presents a synthesis of current information and operating practices related to roadside safety and is written in dual units metric and U S Customary This book is a guide It is not a standard nor is it a design policy It is intended to use as a resource document from which individual highway agencies can develop standards and policies Although much of the material in the guide can be considered universal in its application several recommendations are subjective in nature and may need modification to fit local conditions However it is important that significant deviations from the guide be based on operational experience and objective analysis The 2011 edition of the AASHTO Roadside Design Guide has been updated to include hardware that has met the evaluation criteria contained in the National Cooperative Highway Research Program NCHRP Report 350 Recommended Procedures for the Safety Performance Evaluation of Highway Features and begins to detail the most current evaluation criteria contained under the Manual for Assessing Safety Hardware 2009 MASH For the most part roadside hardware tested and accepted under older guidelines that are no longer applicable has not been excluded in this edition AASHTO website *A Guide for Achieving Flexibility in Highway Design*, 2004 Context sensitive solutions CSS reflect the need to consider highway projects as more than just transportation facilities Depending on how highway projects are integrated into the community they can have far reaching impacts beyond their traffic or transportation function CSS is a comprehensive process that brings stakeholders together in a positive proactive environment to develop projects that not only meet transportation needs but also improve or enhance the community Achieving a flexible context sensitive design solution requires designers to fully understand the reasons behind the processes design values and design procedures that are used This AASHTO Guide shows highway designers how to think flexibly how to recognize the many choices and options they have and how to arrive at the best solution for the particular situation or context It also strives to emphasize that flexible design does not necessarily entail a fundamentally new design process but that it can be integrated into the existing transportation culture This publication represents a major step toward institutionalizing CSS into state transportation departments and other agencies charged with transportation project development **A Policy on Design Standards--interstate System**, 2005 **The 2002 AASHTO Roadside Design Guide** Kimberly Ann Nystrom, 2003 **Highway Safety Design and Operations Guide, 3rd Edition**, **Guidance for Implementation of the AASHTO Strategic Highway Safety Plan**, 2008 **Highway Safety Design and Operations Guide, 1997**, 1997 A replacement to the publication entitled Highway design and operational practices related to highway safety also known as The Yellow Book and most recently published in 1974 **Guidance for Implementation of the AASHTO Strategic Highway Safety Plan** Timothy R. Neuman, National Cooperative Highway Research Program, 2008 Head on crashes that occur on freeways are typically severe in nature and may be on the increase A head on crash typically

occurs when a vehicle crosses the median and crashes with a vehicle traveling in the opposite direction typically called a cross median crash or median crossover crash A head on crash can also occur when a vehicle inadvertently travels the wrong way in the opposing traffic lanes Head on cross median crashes are typically the result of inadvertent actions by a driver potentially in combination with other adverse circumstances such as weather conditions or motorist fatigue Recent experience and research has shown that a comprehensive approach to safety is most effective in creating a safer driving environment and improved effectiveness of safety treatments A number of safety concerns including many related to head on crashes cannot be as effectively solved by solely applying one of the four Es engineering education enforcement and emergency medical services in isolation When reviewing strategies dealing with head on crashes engineers should strongly consider the role of the other four E groups To address the importance of considering a four E approach this document provides strategies that might be considered
