Safety Impacts of Active Safety and Driving Automation Features Jeffrey Wishart,2025-08-13

Advanced technologies that assist the human driver or reduce or even eliminate the human driver s role are becoming

increasingly prevalent in new light duty vehicles used by the general public These technologies are divided between Active

Safety features that monitor the human driver and vehicle motion and act intermittently to mitigate and avoid crashes and

Driving Automation features that assume some or all of the dynamic driving task from the human driver Both types of

technologies have the potential to reduce injuries and save lives by reducing the frequency and or severity of crashes Safety

Impacts of Active Safety and Driving Automation Features addresses the current capabilities and future potential for Active

Safety and Driving Automation features to reduce crash frequency and severity and provides an overview of the state of the

industry for both types of features including current deployments trends and anticipated rollouts Gaps in knowledge

unsettled issues and suggestions for future research will also be discussed ISBN 9781468609752 9781468609769 DOI <https://doi.org/10.4271/EPR2025013>
