funnel may help to reduce spillage (see **Illustration**). Pour oil until the quantity required is at least 100 mm above the level of the oil in the dipstick. Continue adding oil a small quantity at a time until the level is up to the lower mark on the dipstick. Adding around 1.0 litre will bring the level up to the upper mark on the dipstick. Add the 100 mm of oil. Start the engine and run it at 1400 rpm for a few minutes, check for leaks around the oil filter seal and the timing chain ring. Note that there may be a few seconds after before the oil pressure warning light goes out after the engine is started on the oil.

For a quick check, the thickness of each brake pad can be measured through the aperture in the caliper body

11.3 Front brake pad check

1. Fully apply the handbrake. Then jack up the front of the car and support it securely on axle stands. Remove the front wheel(s).

2. For a comprehensive check, the brake pads should be removed and checked. The condition of the upper rail may also be checked, and the condition of the brake disc itself can be fully examined on both sides (Refer to **Chapter 9** page 104).

3. If any pads appear worn it is worth the specified thickness in use, but pads must be replaced as a set.
