

# BIOCHEMICAL EVOLUTION

**LIFE:** the inherent capacity of an organism to maintain and reproduce itself

**BIOCHEMICAL (MOLECULAR) EVOLUTION:** The changes that occur at the molecular level in organisms over a period of time. These range from deletions, additions, or substitutions of single nucleotides, through the rearrangement of parts of genes, to the duplication of entire genes or even whole genomes. Such mutations may result in functional changes to the proteins encoded by the genes, or even the evolution of novel genes and proteins.

**EVOLUTION:** (origin: L. *evolvo*) orderly change from one condition to other to suit the environment. It means to unfold or reveal hidden potentialities.

## CHEMOGENY

It is widely believed that life originated from inanimate matter. The theory of abiogenesis is the only one that provides an explanation and can be tested.

Naturalistic theory or the Theory of Chemical Evolution was given by AI Oparin and JBS Haldane.

Aleksandr Ivanovich Oparin (Russian biochemist) and JBS Haldane (British scientist) put forward the concept that the first living organism originated from a non-living thing. In his book "Origin of Life", Oparin stated "abiogenesis first but biogenesis ever since". His theory is known as Primary Abiogenesis.

R J P Williams, Ros Rickaby, 2012-08-31 This book is written as an addition to Darwin's work and that of molecular biologists on evolution so as to include views of it from the point of view of chemistry rather than just from our knowledge of the biology and genes of organisms. By concentrating on a wide range of chemical elements not just those in traditional organic compounds we show that there is a close relationship between the geological or environmental chemical changes from the formation of Earth and those of organisms from the time of their origin. These are considerations which Darwin or other scientists could not have explored until very recent times since sufficient analytical data were not available. They lead us to suggest that there is a combined geo and bio chemical evolution that of an ecosystem which has had a systematic chemical development. In this development the arrival of new very similar species is shown to be by random Darwinian competitive selection processes such that a huge variety of species coexist with only minor differences in chemistry and advantages. This is in agreement with previous studies. On the large scale of evolution of very different organisms and over greater timescales by way of contrast we observe that groups of species have special different chemical features and function. It is more difficult to understand how they evolved and therefore we examine their chemical development in detail. Overall there is a cooperative evolution of a chemical system driven by capture of energy mainly from the sun and its degradation in which the chemistry of both the environment and organisms are facilitating intermediates. We shall suggest that the overall drive of the whole joint system is to optimise the rate of this energy degradation. Since the environmental changes are inorganic and relatively fast they move inevitably to equilibrium. The living part of the system the organisms under the influence of this inevitable environmental change are forced to follow but as they are increasingly energised and their reactions are slow they move further away from equilibrium. We are able to explore the ways in which this chemical system evolved recognising that as complexity of the chemistry of organisms increased they had to be formed from more and more compartments and to become part of a chemically cooperative overall activity. They could not remain as isolated species. Only in the last chapter do we attempt to make a connection between the changing chemistry of organisms with the coded molecules of each cell which have to exist to explain reproduction The Chemistry of Evolution R.J.P Williams, J.J.R Frausto da Silva, 2005-12-17

Conventionally evolution has always been described in terms of species The Chemistry of Evolution takes a novel not to say revolutionary approach and examines the evolution of chemicals and the use and degradation of energy coupled to the environment as the drive behind it The authors address the major changes of life from bacteria to man in a systematic and unavoidable sequence reclassifying organisms as chemotypes Written by the authors of the bestseller The Biological Chemistry of the Elements The Inorganic Chemistry of Life the clarity and precision of The Chemistry of Evolution plainly demonstrate that life is totally interactive with the environment This exciting theory makes this work an essential addition to the academic and public library Provides a novel analysis of evolution in chemical terms Stresses Systems Biology Examines the connection between life and the environment starting with the big bang theory Reorientates the chemistry of life by emphasising the need to analyse the functions of 20 chemical elements in all organisms

Bernd-Olaf Küppers,2012-12-06 The subject of this book is the physico chemical theory of the origin of life Although this theory is still in *statu nascendi* it has been developed in recent years to the point where a coherent presentation is possible The book is intended as an introductory text for students of physics chemistry or biology This interdisciplinary aim has necessitated a choice of material based on the lowest common denominator of physicists and biologists In particular the predominantly mathematical and biological sections have been presented at the most elementary level possible The less mathematically inclined reader can omit Sections 5 3 5 5 5 7 5 10 6 2 6 3 9 1 9 3 12 1 and 13 3 without losing the overall view For critical reading of the manuscript for discussions and for many useful suggestions I wish to thank M Eigen Gottingen w e Gardiner Austin D Porschke Gottingen P Schuster Vienna P R Wills Auckland and P Woolley Berlin The translation of the original German manuscript into English was kindly undertaken by Paul Woolley During this and subsequent stages of revision he introduced a great many improvements in the text and the presentation of material My particular thanks are due to him for his decisive contribution to this book Last of all I wish to thank Ingeborg Lechten for typing the text in its various stages of evolution The completion of this book is largely to be attributed to her patience and efficiency

#### *Vital Question* Nick

Lane,2015-07-13 One of the deepest most illuminating books about the history of life to have been published in recent years The Economist The Earth teems with life in its oceans forests skies and cities Yet there s a black hole at the heart of biology We do not know why complex life is the way it is or for that matter how life first began In The Vital Question award winning author and biochemist Nick Lane radically reframes evolutionary history putting forward a solution to conundrums that have puzzled generations of scientists For two and a half billion years from the very origins of life single celled organisms such as bacteria evolved without changing their basic form Then on just one occasion in four billion years they made the jump to complexity All complex life from mushrooms to man shares puzzling features such as sex which are unknown in bacteria How and why did this radical transformation happen The answer Lane argues lies in energy all life on Earth lives off a voltage with

the strength of a lightning bolt Building on the pillars of evolutionary theory Lane's hypothesis draws on cutting edge research into the link between energy and cell biology in order to deliver a compelling account of evolution from the very origins of life to the emergence of multicellular organisms while offering deep insights into our own lives and deaths Both rigorous and enchanting The Vital Question provides a solution to life's vital question why are we as we are and indeed why are we here at all Principles of Evolution Hildegard Meyer-Ortmanns, Stefan Thurner, 2011-04-11 With contributions from a team of leading experts this volume provides a comprehensive survey of recent achievements in our scientific understanding of evolution The questions it asks concern the beginnings of the universe the origin of life and the chances of its arising at all the role of contingency and the search for universal features in the plethora of evolutionary phenomena Rather than oversimplified or premature answers the chapters provide a clear picture of how these essential problems are being tackled enabling the reader to understand current thinking and open questions The tools employed stem from a range of disciplines including mathematics physics biochemistry and cell biology Self organization as an overarching concept is demonstrated in the most diverse areas from galaxy formation in the universe to spindle and aster formation in the cell Chemical master equations population dynamics and evolutionary game theory are presented as suitable frameworks for understanding the universal mechanisms and organizational principles observed in a wide range of living units ranging from cells to societies This book will provide engaging reading and food for thought for all those seeking a deeper understanding of the science of evolution Molecular Evolution Duane L. Röhlffing, 2012-12-06 Form much of his professional career Sidney W Fox has devoted his thought and research to studies of molecular evolution MOLECULAR EVOLUTION PREBIOLOGICAL AND BIOLOGICAL is a dedicatory volume of thirty five contributed papers commemorating on the occasion of his sixtieth birthday his many achievements The volume had its conception in the USSR by AIO had much of its development in the USA by DLR and was made possible by the enthusiastic responses and encouragements of fifty eight contributors from ten nations and many disciplines These numbers connote not only the esteem in which S W Fox is regarded but also the international and interdisciplinary nature of studies of molecular evolution The term molecular evolution is often associated with abiotic or prebiotic evolution it is also used to denote processes of biotic evolution at the molecular level The point of merger of these two sub areas of life represents but one stage albeit a very important one in the total process of the evolution of matter from hydrogen to Homo sapiens and beyond This volume considers aspects of molecular evolution in this broader sense Accordingly the contributors include persons experienced in the prebiological and also the biological aspects of molecular evolution several outside viewpoints are provided by persons whose principal interests lie in other disciplines The contributions are both experimental and theoretical Biochemical Evolution William C. Simpson, 1963 **Genesis and Evolutionary Development of Life** A. I. Oparin, 2013-10-22 Genesis and Evolutionary Development of Life discusses the present state of thought on the origin and development of life The book contains six chapters and begins with a brief history

of attempts to solve the problem of the origin of life. This is followed by separate chapters that discuss the following events: the initial stages in the evolution of carbon compounds, formation of the primitive soup, origin of prebiological systems, evolution of protobionts and the origin of the first organisms, and the further evolution of the first organisms.

**The Origin of Life and Evolutionary Biochemistry** Klaus Dose, 1974-07-01

**Biochemical Adaptation** Peter William Hochachka, George N.

Somero, 2002 Suitable for graduates and undergraduates in environmental biology, comparative physiology and marine biology, this text lays out the principles of mechanistic comparative physiology in an ecological and evolutionary context. This text lays out the principles of mechanistic comparative physiology in an ecological and evolutionary context. The subject of evolutionary physiology has been advancing considerably and this book will bring readers up to date on a number of new techniques, ideas and data. Topics include NMR spectroscopy and molecular biology, evolution and adaptation, phylogenetically based analytical techniques and more.
