Advances in Medical Education A.J.J.A. Scherpbier, Cees P.M. van der Vleuten, J.J. Rethans, A.F.W. van der Steeg, 2012-12-06 About 550 registrants from 51 different countries attended the Seventh Ottawa Conference on Medical Education and Assessment in Maastricht We received 525 abstracts for the conference divided in thematic poster sessions and platform presentations Organising the conference was an honour and we tried to meet the high standards of a friendly and relaxed atmosphere which has characterized previous Ottawa conferences During and after the conference about 250 papers were submitted for publication in the conference proceedings leaving us little time for a post conference depression Despite the large number of papers the editors have attempted to review and edit the papers as care fully as possible Occasionally however correspondence exceeded reasonable deadlines preventing careful editing of a small number of the papers Although we felt that our editorial task was not quite finished we nevertheless decided to include these papers We thank the many authors for their enthusiastic and prompt response to occasionally tedious editorial suggestions and requests

We are sure that this collective effort has resulted in a book that will make an important contribution to the field of medical education. The editors want to thank Jocelyn Flippo Berger whose expertise with desk top publishing and perseverance was a great help.

**Practical Skills in Biomolecular Sciences** Robert H. Reed, 2003

Practical Skills in Biomolecular Sciences Laboratory and field studies are essential components of undergraduate training in the life sciences. Practical work must be fully understood and effectively presented but many students underperform because they lack basic laboratory skills. This book now in its second edition continues to provide students with easy to use guidance for laboratory and field studies but in addition it now covers broader transferable skills. As a result the new edition provides guidance and support over the entire range of a typical undergraduate course in biomolecular sciences. New features for the second edition: A new section at the front of the book on Study and Examination skills including new chapters on time management, working with others, note taking, revising, assessment and exams and preparing a cv. New chapters on bioinformatics and on the preparation and use of calibration curves. Updated material on the use of the Internet and World Wide Web. New material on evaluating information, a vital skill for today's students. New material in the numeracy and statistics chapters to provide greater support and guidance. Every chapter has study exercises to reinforce learning with problems and practical exercises. Answers are given at the back of the book for all exercises. Every chapter is supported by a section giving printed and electronic sources for further study. Retained features from previous edition: Worked examples and how to boxes that set out the essential procedures in a step by step manner. Key points highlighting critical features of methodology. Use of margin tips, definitions and illustrations. Use of two colour text throughout the book. Practical Skills in Biomolecular Sciences is an indispensable book for undergraduate students in a range of subjects including biochemistry, genetics, molecular biology and biomedical sciences. It is also a valuable resource for teachers of these subjects in colleges and secondary schools.
