Biological Classification POGIL

How are organisms grouped, sorted, and classified?

Why?

From the time we begin to talk, we start to name things. We like to see how things are related. It is natural then, that biologists would name and organize organisms into a classification system. In this activity you will learn about the major classification groups and how organisms are named.

Kingdoms, Empires, and Domains Mark A. Ragan, 2023 This work explores how living organisms have been classified at the highest level. The earliest ideas of nature emphasised transformation. Aristotle recognised that certain objects in the sea share properties of plants and animals; these became known as zoophytes. The narrative follows zoophytes and other transgressive beings through subsequent philosophical and religious traditions, myths, travellers' tales, the occult literature, alchemy, scholasticism, the consolidation of vernacular languages, and the rise of scientific botany and zoology. Leeuwenhoek's discovery of microscopic beings and Trembley's studies on Hydra complicated the plant-animal dichotomy. Transformation returned as Needham, Buffon, and others observed plant material to generate motile animalcules. Linnaeus proposed a *Regnum Chaoticum*. New challenges arose as the Great Chain of Being was abandoned; algae were observed to liberate free-swimming zoospores, and cell theory was refined. Biology developed differently in France, Germany, and Britain, and we follow the rise and fall of supernumerary kingdoms in each environment. Haeckel positioned Protista as one of two, three, or four kingdoms. In the Twentieth century, the living world was divided between prokaryotes and eukaryotes, while mitochondria and plastids were recognised as descendants of endosymbiotic bacteria. Molecular evidence revealed three domains: Archaea, Bacteria, Eukaryota, although many genomes are linked in a dynamic network of genetic relationships. Environmental genomes now threaten to undermine Eukaryota as an independent domain of life.

Do Species Exist? Werner Kunz, 2012 The species problem: the two questions: do species exist, and if yes, according to what criteria? Do two individuals belong to the same species? is one of the oldest questions in biology. Darwin's *Origin of the Species* was, and still is, one of the most comprehensive answers to this problem. However, even Darwin's work cannot satisfactorily explain many of the speciation questions. Over the years, many concurrent taxonomic systems have evolved, each of them particularly well suited for the speciation of certain groups of organisms, but all of them fail to provide a universal answer to all questions relating to speciation. *Do Species Exist?* is a readily comprehensible guide for a wide audience of biologists, field taxonomists, and philosophers, giving an excellent overview of the species problem without delving into the many feuds between the different schools of taxonomy.
