**Biological Control of Rice Diseases** Samuel S. Gnanamanickam, 2009-07-14 There is sufficient need to document all the available data on biological control of rice diseases in a small volume Part of this need rests on the global importance of rice to human life In the first chapter I have tried to show that rice is indeed life for most people in Asia and shortages in production and availability can lead to a food crisis While rice is cultivated in most continents biological disease management attains special relevance to rice farmers of Africa Asia and also perhaps Latin America These farmers are resource poor and might not be able to afford the cost of expensive chemical treatments to control devastating rice pathogens such as *Magnaporthe oryzae* blast *Xanthomonas oryzae* pv *oryzae* bacterial leaf blight *Rhizoctonia solani* sheath blight and the virus rice tungro disease In an earlier volume that I developed under the title *Biological Control of Crop Diseases* Dekker CRC Publishers 2002 I included transgenic crops generated for the management of plant pathogens as biological control under the umbrella of a broad definition Dr Jim Cook who wrote the Foreword for the volume lauded the inclusion of transgenic crops and induced systemic resistance ISR as a positive trend toward acceptance of host plant resistance as part of biocontrol I continue to subscribe to this view
