

Conservation of Biological Diversity (Biodiversity Conservation) (NOTES)

Definition: Biodiversity is defined as the variety and variability among all groups of living organisms and the ecosystem in which they live.

Significance of biodiversity

1. Biodiversity protects the fresh air, clean water and productive land.
2. It is also important for forestry, fisheries and agriculture, which depend on rich water variety of various biological resources available in nature.
3. Loss of biodiversity exerts heavy economic and social costs for any country.
4. It is very important for human life; we depend on plants, microorganisms and earth's animals for our food, medicine and industrial products.

Biodiversity is usually considered at 3 different levels

1. Genetic diversity
2. Species diversity
3. Ecosystem diversity

(1) Genetic diversity: Genes are the basic unit of hereditary information, transmitted from one generation to the other. Within individual species, there are a number of varieties, which are slightly different from one another. These differences are due to difference in the combination of genes.

Example: all rice varieties belong to the species "*Oryza sativa*"; but there are thousands of wild and cultivated varieties of rice, which shows variations at the genetic level and are different in their colour, size, shape, nutrient content of the plant.

(2) Species diversity: A discrete group of organisms of the same kinds is known as species. Species diversity is the diversity between different species. The sum
