*Biological Oceanography: An Introduction* Carol Lalli, Timothy R. Parsons, 1997-04-10 This popular undergraduate textbook offers students a firm grounding in the fundamentals of biological oceanography. As well as a clear and accessible text, learning is enhanced with numerous illustrations including a colour section, thorough chapter summaries and questions with answers and comments at the back of the book. The comprehensive coverage of this book encompasses the properties of seawater which affect life in the ocean, classification of marine environments and organisms, phytoplankton and zooplankton, marine food webs, larger marine animals, marine mammals, seabirds and fish life on the seafloor, and the way in which humans affect marine ecosystems. The second edition has been thoroughly updated, including much data available for the first time in a book at this level. There is also a new chapter on human impacts from harvesting vast amounts of fish, pollution and deliberately or accidentally transferring marine organisms to new environments. This book complements the Open University Oceanography Series, also published by Butterworth Heinemann, and is a set text for the Open University third level course S330. A leading undergraduate text, New chapter on human impacts, a highly topical subject, Expanded colour plate section.

**The Estuarine Ecosystem** Donald S. McLusky, Michael Elliott, 2004-04-29 For the inhabitants of many of the world's major towns and cities estuaries provide their first and nearest glimpse of a natural habitat. Despite the attempts of man to pollute or reclaim it the estuarine ecosystem continues to provide a fascinating insight into a natural world where energy is transformed from sunlight into plant material and then through the steps of a food chain is converted into a rich food supply for birds and fish. The book provides a concise readable introduction to estuarine ecology. First published in 1981 it soon established itself as the principle textbook of choice in the UK NW Europe. This new edition builds upon the strengths of the earlier editions but has been thoroughly revised throughout. The new co author brings a human impact dimension to the revised book. It is written for advanced undergraduate and graduate students particularly taught masters who have had a general ecology course but no further training in estuarine science. It will be useful to both professional researchers and practical managers in marine ecology and environmental science who seek a compact but comprehensive introduction to estuarine ecology.

**Biological Oceanography** Charles B. Miller, Patricia A. Wheeler, 2012-04-11 This new edition of Biological Oceanography has been greatly updated and expanded since its initial publication in 2004. It presents current understanding of ocean ecology emphasizing the character of marine organisms from viruses to fish and worms together with their significance to their habitats and to each other. The book initially emphasizes pelagic organisms and processes but benthos, hydrothermal vents, climate change effects and fisheries all receive attention. The chapter on oceanic biomes has been greatly expanded and a new chapter reviewing approaches to pelagic food webs has been added. Throughout the book has been revised to account for recent advances in this rapidly changing field. The increased importance of molecular genetic data across the field is evident in most of the chapters. As with the previous edition the book is primarily written for senior undergraduate and graduate students of ocean ecology and professional marine ecologists.
