

10 LESSON FROM THINKING FAST AND SLOW

BY COMPOUNDING QUALITY

1. Our brain uses two systems: System 1 and System 2

System 1 is fast, intuitive and automatic. It is prone to biases and errors such as overconfidence.

System 2 is slow, analytical, and deliberate. It is necessary for complex tasks requiring focused attention.

2. Irrationality

Humans are not rational. We all make a lot of irrational mistakes. 90% of Americans think they can drive better than average and 70% think they are smarter than average.

3. The Halo Effect

The halo effect is a cognitive bias where your overall impression of a person influences your perception on their individual traits or qualities.

If you like someone, you'll overestimate their capabilities and vice versa.

4. Sunk cost fallacy

The sunk cost fallacy appears when you keep investing in something even if it's not worth it, simply because you've already invested resources in it.

Think about choosing to finish a boring movie because you already paid for the ticket.

5. Hindsight bias

The tendency, after an event has occurred, to believe that one would have predicted or expected the outcome.

A good example is that after attending a baseball game, you might insist that you knew that the winning team was going to win beforehand.

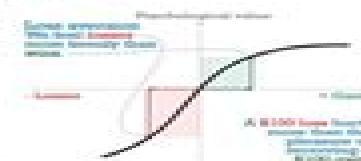

6. Prospect theory

The prospect theory suggests that people feel losses twice as hard as gains.

Many people don't want to play a Heads or Tails game where they can win \$100 but risk losing \$50.

You should take this bet every single day.

7. Availability heuristic

The availability heuristic is a cognitive bias where you judge the likelihood of an event based on how easily it comes to mind.

A good example is 9/11 which made people afraid of flying.

8. Confirmation bias

People tend to seek out information that confirms their existing beliefs and ignore information that contradicts it.

As an investor, always talk with people who have opposing views. It will be very insightful.

9. Framing effect

When the way information is presented influences your decisions and perceptions, we call it a framing effect.

For example: studies have shown that 75% lean meat is usually preferred over 25% fat meat, even though it's the same thing.

10. Anchoring effect

The anchoring effect is a bias where you rely too heavily on the first piece of information you receive when making a decision.

If you first see a car that costs \$100k and then see a second one that costs \$70k, you tend to see the second car as cheap.

Program Evaluation Theory and Practice, First Edition Donna M. Mertens, Amy T. Wilson, 2012-03-01 This engaging text takes an evenhanded approach to major theoretical paradigms in evaluation and builds a bridge from them to evaluation practice. Featuring helpful checklists, procedural steps, provocative questions that invite readers to explore their own theoretical assumptions and practical exercises, the book provides concrete guidance for conducting large and small scale evaluations. Numerous sample studies, many with reflective commentary from the evaluators, reveal the process through which an evaluator incorporates a paradigm into an actual research project. The book shows how theory informs methodological choices, the specifics of planning, implementing, and using evaluations. It offers balanced coverage of quantitative, qualitative, and mixed methods approaches. Useful pedagogical features include Examples of large and small scale evaluations from multiple disciplines, Beginning of chapter reflection questions that set the stage for the material covered, Extending your thinking questions and practical activities that help readers apply particular theoretical paradigms in their own evaluation projects, Relevant Web links including pathways to more details about sampling, data collection and
