## **Electromagnetic Field Interaction with Transmission**

**Lines** Farhad Rachidi,Sergey Tkachenko,2008 The evaluation of electromagnetic field coupling to transmission lines is an important problem in electromagnetic compatibility Traditionally use is made of the TL approximation which applies to uniform transmission lines with electrically small cross sectional dimensions where the dominant mode of propagation is TEM Antenna mode currents and higher order modes appearing at higher frequencies are neglected in TL theory The use of the TL approximation has permitted to solve a large range of problems e g lightning and EMP interaction with power lines However the continual increase in operating frequency of products and higher frequency sources of disturbances such as UWB systems makes that the TL basic assumptions are no longer acceptable for a certain number of applications In the last decade or so the generalization of classical TL theory to take into account high frequency effects has emerged as an important topic of study in electromagnetic compatibility This effort resulted in the elaboration of the so called generalized or full wave TL theory which incorporates high frequency radiation effects while keeping the relative simplicity of TL equations This book is organized in two main parts Part I presents consolidated knowledge of classical transmission line theory and different field to transmission line coupling models Part II presents different approaches developed to generalize TL Theory

**Failure Assessment of Thin-walled Structures with Particular Reference to Pipelines** Lie Zhang,2010 This book

describes integrity management procedures for thin walled structures such as gas pipelines It covers various methods for the analysis of crack growth in thin walled structures and the probability of failure evaluation of pipelines using the Monte Carlo simulation The focus of this book is on the practical applications of the boundary element method finite element method and probabilistic fracture mechanics Popular methods for SIF calculation crack growth are presented and the evaluation of failure probabilities based on BS7910 is also explained in detail The procedures described in the book can be used to optimise the maintenance of pipelines thereby reducing the operating costs This book will be of interest to pipeline engineers postgraduate students and university researchers
