Book And Data Protection Move Developments Governance:

The European Union as Guardian of Internet Privacy Hielke Huijman, 2016-09-06 This book examines the role of the EU in ensuring privacy and data protection on the internet. It describes and demonstrates the importance of privacy and data protection for our democracies and how the enjoyment of these rights is challenged by particularly big data and mass surveillance. The book takes the perspective of the EU mandate under Article 16 TFEU. It analyses the contributions of the specific actors and roles within the EU framework: the judiciary, the EU legislator, the independent supervisory authorities, the cooperation mechanisms of these authorities, as well as the EU as actor in the external domain. Article 16 TFEU enables the Court of the Justice of the EU to play its role as constitutional court and to set high standards for fundamental rights protection. It obliges the European Parliament and the Council to lay down legislation that encompasses all processing of personal data. It confirms control by independent supervisory authorities as an essential element of data protection and it gives the EU a strong mandate to act in the global arena. The analysis shows that EU powers can be successfully used in a legitimate and effective manner and that this subject could be a success story for the EU in times of widespread euroskepticism. It demonstrates that the Member States remain important players in ensuring privacy and data protection. In order to be a success story, the key stakeholders should be prepared to go the extra mile so it is argued in the book. The book is based on academic research for which the author received a double doctorate at the University of Amsterdam and the Vrije Universiteit Brussels. It builds on a long inside experience within the European institutions as well as within the community of data protection and data protection authorities. It is a must read in a time where the setting of EU privacy and data protection is changing dramatically not only as a result of the rapidly evolving information society but also because of important legal developments such as the entry into force of the General Data Protection Regulation. This book will appeal to all those who are in some way involved in making this regulation work. It will also appeal to people interested in the institutional framework of the European Union and in the role of the Union of promoting fundamental rights also in the wider world.

Technoscience and Citizenship: Ethics and Governance in the Digital Society Ana Delgado, 2017-01-05 This book provides insights on how emerging technosciences come together with new forms of governance and ethical questioning. Combining science and technologies and ethics approaches, it looks at the emergence of three key technoscientific domains: body enhancement technologies, biometrics and technologies for the production of space, exploring how human bodies and minds, the movement of citizens and space become matters of technoscientific governance. The emergence of new and digital technologies pose new challenges for representative democracy and existing forms of citizenship. As citizens encounter and have to adapt to technological change in their everyday life, new forms of conviviality and contestation emerge. This book is a key reference for scholars interested in the governance of emerging technosciences in the fields of science and technology studies and ethics.
