1. The first step in the process of the cell cycle is the replication of DNA. This process occurs during the S phase of the cell cycle. The DNA molecule is duplicated, resulting in two identical DNA molecules. This process is essential for the cell to divide and produce two daughter cells.

2. The second step in the process of the cell cycle is the division of the cell. This process occurs during the M phase of the cell cycle. The cell divides into two daughter cells, each containing a copy of the DNA molecule. This process is essential for the cell to grow and reproduce.

3. The third step in the process of the cell cycle is the regulation of the cell cycle. This process occurs throughout the cell cycle. The cell cycle is regulated by a complex system of proteins and signaling molecules. This system ensures that the cell cycle proceeds in a controlled and orderly manner.
