**Water-soluble Vitamin Assays in Human Nutrition** G.F.M. Ball, 2012-12-06 this is a valuable addition to the food analyst's library. It brings together a well balanced account of the methods available and the literature cited will provide the analyst with all the details needed for setting up water soluble vitamin assays and further reading to understand why these vitamins are important to those concerned with human nutrition. International Journal of Food Science and Technology This book is of practical use as a tool and reference work of laboratory managers, senior analysts and laboratory technicians in food and vitamin manufacturing companies for those in government and research institutes and for medical researchers, public analysts and nutritionists. It can also be recommended for a broad audience including lectures, students of natural sciences and food technologists. In this book I recommend Water soluble vitamins Assays in Human Nutrition not only to scientist in academia and industry and students in all food related fields as a valuable and easily used reference, it will most likely be the first book I reach for when the inevitable question arises. April 1994 Price 115.00 UK. *Technology of Dairy Products* Ralph Early, 1998 This second revised edition of The technology of dairy products continues to explain methods of milk product manufacture, the technology involved and how other influences affect finished products.

**The Technology of Vitamins in Food** P. Berry Ottaway, 2012-12-06 The last few years have seen a growing consumer awareness of nutrition and healthy eating in general. As a consequence the food industry has become more concerned with the nutritional value of products and the maintenance of guaranteed micronutrient levels. While the food industry has the responsibility of producing foods that provide a realistic supply of nutrients including vitamins it is now also required to offer produce with a high degree of convenience and a long shelf life. Vitamins are relatively unstable being affected by factors such as heat, light and other food components but also by the processes needed to preserve the goods or to convert them into consumer products such as pasteurization, sterilization, extrusion and irradiation. The result of these interactions may be a partial or total degradation of the vitamins. Food technology is concerned with both the maintenance of vitamin levels in foods and the restoration of the vitamin content to foods where losses have occurred. In addition foods designed for special nutritional purposes such as infant food and slimming goods need to be enriched or fortified with vitamins and other micronutrients. This book reviews vitamins as ingredients of industrially manufactured food products. The technology of their production and use is covered from the food technologist's and engineer's points of view. Detailed coverage is also provided of other technical aspects such as analysis, stability and the use of vitamins as food technological aids. **Disinfection and Decontamination** Gurusamy Manivannan, 2007-10-04 In the battle between humans and microbes knowledge may be not only the best weapon but also the best defense. Pulling contributions from 34 experts into a unified presentation, *Disinfection and Decontamination Principles Applications and Related Issues* provides coverage that is both sophisticated and practical. The book reviews the fundamental principles of disinfection and decontamination, their applications in various industries, and related issues. It is a valuable resource for researchers, practitioners, and students in the field of food safety and hygiene.
