Apocalypse Not Science Economics And Environmentalism:

Apocalypse Not Ben W. Bolch, Harold Lyons, 1993 What is likely to kill off the human race first Overpopulation Global warming Ozone depletion Chemicals and insecticides Would you believe none of these Drawing on scientific evidence Ben Bolch and Harold Lyons an economist and a chemist show that the prophets of apocalyptic doom mislead and scare the public with their warnings of impending catastrophes *Apocalypse Not* debunks the alleged global threats to mankind as well as the scares about asbestos and radon It fosters respect for calm objective science while showing that the doomsday lobbyists exploit ignorance and cause hysteria Bolch and Lyons go on to show that contrary to the beliefs of some environmentalists modern society and the growth in population do not threaten our quality of life In fact science and industry have enabled more people to live longer healthier lives than ever before Resources are cheaper and more plentiful than anytime in history In light of those facts the authors take up the perplexing question of why the environmental movement with its apparent death wish has been able to persuade so many people that the human race is doomed Their answer to that question could help turn the tide that threatens to undo the industrial and scientific revolutions This book is the book that will restore good sense to thinking about the environment

Environmental Skepticism Mr Peter J Jacques, 2013-03-28

Environmental skepticism describes the viewpoint that major environmental problems are either unreal or unimportant In other words environmental skepticism holds that environmental problems especially global ones are inauthentic Peter Jacques describes both empirically and historically how environmental skepticism has been organized by mostly US based conservative think tanks as an anti environmental counter movement This is the first book to analyze the importance of the US conservative counter movement in world politics and its meaning for democratic and accountable deliberation as well as its importance as a mal adaptive project that hinders the world's people to rise to the challenges of sustainability Specific consideration is given to the threat of the counter movement to marginalized people of the world and its philosophical implications through its commitment to a deep anthropocentrism
