Landscape Architecture and Digital Technologies explores how digital technologies are reshaping design and making in landscape architecture. While the potentials of digital technologies are well documented within landscape planning and visualisation their application within design practice is far less understood. This book highlights the role of the digital model in encouraging a new design logic that moves from the privileging of the visual to a focus on processes of formation bridging the interface of the conceptual and material the virtual and the physical. Drawing on interviews and projects from a range of international designers including Snhetta, Arup, Gustafson Porter, ASPECT Studios, Grant Associates, Catherine Mosbach, Philippe Rahm, PARKKIM, LAAC and PEG office of landscape architecture among others the authors explore the influence of parametric modelling, scripting, real time data simulation, prototyping, fabrication and Building Information Modelling on the design and construction of contemporary landscapes. This engagement with practice is expanded through critical reflection from academics involved in landscape architecture programs around the world that are reshaping their research and pedagogy to reflect an expanded digital realm. Crossing critical theory, technology and contemporary design the book constructs a picture of an emerging twenty first century practice of landscape architecture practice premised on complexity and performance. It also highlights the disciplinary demands and challenges in engaging with a rapidly evolving digital context within practice and education. The book is of immense value to professionals and researchers and is a key publication for digital landscape courses at all levels.

*Learning Autodesk Revit 2015* Kristen Smith, Victoria Shipley, 2014-05-01

Learning Revit 2015 is uniquely designed to be an effective learning tool in both self paced and classroom environments. This courseware will take you through the essential areas of Autodesk Revit which will enable you to master the tools needed to efficiently create and document a BIM model. The content is organized in such a way that it intuitively guides you through the design process. In each lesson you learn about the design process or tool the steps required to be successful and then an exercise that walks you through those steps and options so you experience it in a real world design scenario. After you master the essential aspects of Revit the book then becomes a valuable desktop reference enabling you to dive deeper into the concepts, processes and tools that will make you more productive. The information covered in this manual is written for Autodesk Revit or Autodesk Revit Architecture and is also applicable when working in Autodesk Revit MEP and Autodesk Revit Structure.

*Design Integration Using Autodesk Revit 2014* Daniel John Stine, 2013 Design Integration Using Autodesk Revit 2014 is designed to provide the reader with a well rounded knowledge of Autodesk Revit tools and techniques. All three flavors of the Revit platform are introduced in this textbook. This approach gives the reader a broad overview of the Building Information Modeling (BIM) process. The topics cover the design integration of most of the building disciplines: Architectural, Interior Design, Structural, Mechanical, Plumbing and Electrical. Civil is not covered but adding topography to your model is. Each book comes with a CD containing numerous video presentations of the written material. Throughout the book the student develops a two story law office. The drawings start with the floor plans and develop all the way to photo realistic

renderings similar to the one on the cover of this book. Along the way the building's structure, ductwork, plumbing and electrical power and lighting are modeled. By the end the reader will have a thorough knowledge of many of the Revit basics needed to be productive in a classroom or office environment. Even if you will only be working with one component of Revit in your chosen profession this book will give you important knowledge on how the other disciplines will be doing their work and valuable insight into the overall process. As an instructor the author understands that many students in a classroom setting have varying degrees of computer experience. To help level the playing field the first chapter is devoted to an introduction to computers. Much of the basics are covered from computer hardware and software to file management procedures including step by step instructions on using a flash drive. Chapters 2 through 5 cover many of the Revit basics needed to successfully and efficiently work in the software. Once the fundamentals are covered the remaining chapters walk the reader through a building project which is started from scratch so nothing is taken for granted by the reader or the author.

*Building Information Modelling (BIM) in Design, Construction and Operations* L. Mahdjoubi, C.A. Brebbia, R. Laing, 2015-09-09. Building Information Modelling BIM in Design Construction and Operations contains the proceedings of the first in a planned series of conferences dealing with design coordination, construction, maintenance, operation and decommissioning. The book gives details of how BIM tools and techniques have fundamentally altered the manner in which modern construction teams operate the processes through which designs are evolved and the relationships between conceptual, detail, construction and life cycle stages. The papers contributed by experts from industry practice and academia debate key topics, develop innovative solutions and predict future trends. The interdisciplinary nature of the contents and the collaborative practices discussed are so important within the built environment that they will appeal to those engaged in design, surveying, visualisation, infrastructure, real estate, construction, law, insurance and facilities management. Topics covered include BIM in design coordination, BIM in construction operations, BIM in building operation and maintenance, BIM and sustainability, BIM and collaborative working and practices, BIM health and safety and BIM facilities management integration among others.
