Advanced and Multivariate Statistical Methods Craig A. Mertler, Rachel A. Vannatta, 2016-10-24 Ideal for non math majors Advanced and Multivariate Statistical Methods teaches students to interpret present and write up results for each statistical technique without overemphasizing advanced math This highly applied approach covers the why what when and how of advanced and multivariate statistics in a way that is neither too technical nor too mathematical Students also learn how to compute each technique using SPSS software New to the Sixth Edition Instructor ancillaries are now available with the sixth edition All SPSS directions and screenshots have been updated to Version 23 of the software Student learning objectives have been added as a means for students to target their learning and for instructors to focus their instruction Key words are reviewed and reinforced in the end of chapter material to ensure that students understand the vocabulary of advanced and multivariate statistics

Applied Multivariate Statistics for the Social Sciences Keenan A. Pituch, James P. Stevens, 2015-12-07 Now in its 6th edition the authoritative textbook Applied Multivariate Statistics for the Social Sciences continues to provide advanced students with a practical and conceptual understanding of statistical procedures through examples and data sets from actual research studies With the added expertise of co author Keenan Pituch University of Texas Austin this 6th edition retains many key features of the previous

editions including its breadth and depth of coverage a review chapter on matrix algebra applied coverage of MANOVA and emphasis on statistical power In this new edition the authors continue to provide practical guidelines for checking the data assessing assumptions interpreting and reporting the results to help students analyze data from their own research confidently and professionally Features new to this edition include NEW chapter on Logistic Regression Ch 11 that helps readers understand and use this very flexible and widely used procedure NEW chapter on Multivariate Multilevel Modeling Ch 14 that helps readers understand the benefits of this newer procedure and how it can be used in conventional and multilevel settings NEW Example Results Section write ups that illustrate how results should be presented in research papers and journal articles NEW coverage of missing data Ch 1 to help students understand and address problems associated with incomplete data Completely re written chapters on Exploratory Factor Analysis Ch 9 Hierarchical Linear Modeling Ch 13 and Structural Equation Modeling Ch 16 with increased focus on understanding models and interpreting results NEW analysis summaries inclusion of more syntax explanations and reduction in the number of SPSS SAS dialogue boxes to guide students through data analysis in a more streamlined and direct approach Updated syntax to reflect newest versions of IBM SPSS 21 SAS 9 3 A free online resources site at www.routledge.com/9780415836661 with data sets and syntax from the text additional data sets and instructor s resources including PowerPoint lecture slides for select chapters a conversion guide for 5th edition adopters and answers to exercises Ideal for advanced graduate level courses in education psychology and other social sciences in which multivariate statistics advanced statistics or quantitative techniques courses are taught this book also appeals to practicing researchers as a valuable reference Pre requisites include a course on factorial ANOVA and covariance however a working knowledge of matrix algebra is not assumed *Theory-Based Data Analysis for the Social Sciences* Carol S. Aneshensel, 2013 This book presents the elaboration model for the multivariate analysis of observational quantitative data This model entails the systematic introduction of third variables to the analysis of a focal relationship between one independent and one dependent variable to ascertain whether an inference of causality is justified Two complementary strategies are used an exclusionary strategy that rules out alternative explanations such as spuriousness and redundancy with competing theories and an inclusive strategy that connects the focal relationship to a network of other relationships including the hypothesized causal mechanisms linking the focal independent variable to the focal dependent variable The primary emphasis is on the translation of theory into a logical analytic strategy and the interpretation of results The elaboration model is applied with case studies drawn from newly published research that serve as prototypes for aligning theory and the data analytic plan used to test it these studies are drawn from a wide range of substantive topics in the social sciences such as emotion management in the workplace subjective age identification during the transition to adulthood and the relationship between religious and paranormal beliefs The second application of the elaboration model is in the form of original data analysis presented in two Analysis Journals that are integrated throughout the text and implement the full

Applied Multivariate Statistics for the Social Sciences James Paul Stevens, 2001 This best selling text is written for those who use rather than develop advanced statistical methods Dr Stevens focuses on a conceptual understanding of the material rather than proving results Helpful narrative and numerous examples enhance understanding and a chapter on matrix algebra serves as a review Printouts from SPSS and SAS with annotations indicate what the numbers mean and encourage interpretation of the results In addition to demonstrating how to use the packages effectively the author stresses the importance of checking the data assessing the assumptions and ensuring adequate sample size by providing guidelines so that the results can be generalized The new edition features a CD ROM with the data sets and many new exercises Ideal for courses on advanced or multivariate statistics found in psychology education and business departments the book also appeals to practicing researchers with little or no training in multivariate methods Prerequisites include a course on factorial analysis of variance It does not assume a working knowledge of matrix algebra Using Statistical Methods in Social Science Research Professor and Chair of Research Sequence at the School of Social Work Soleman H Abu-Bader, Soleman H. Abu-Bader, 2021-01-12 Using Statistical Methods in Social Science Research Third Edition is the user friendly text every student needs for analyzing and making sense of quantitative data With over 20 years of experience teaching statistics Soleman H Abu Bader provides an accessible step by step description of the process needed to organize data choose a test or statistical technique analyze interpret and report research findings The book begins with an overview of research and statistical terms followed by an explanation of

basic descriptive statistics It then focuses on the purpose rationale and assumptions made by each test such as Pearson s correlation student s t tests analysis of variances and simple linear regression among others The book also provides a wealth of research examples that clearly display the applicability and function of these tests in real world practice In a separate appendix the author provides a step by step process for calculating each test for those who still like to understand the mathematical formulas behind these processes
