Ainger,Robert J. Grieve,2012-12-06 The Background to the Institute The NATO Advanced Study Institute ASI People and Computers Applying an Anthropocentric Approach to Integrated Production Systems and Organisations came about after the distribution of a NATO fact sheet to Brunei University which described the funding of ASIs The embryonic director of the ASI brought this opportunity to the

attention of the group of people some at Brunei and some from outside who were together responsible for the teaching and management of the course in Computer Integrated Manufacturing CIM in Brunei's Department of Manufacturing and Engineering Systems. This course had been conceived in 1986 and was envisaged as a vehicle for teaching manufacturing engineering students the technology of information integration through project work. While the original idea of the course had also included the organisational aspects of CIM the human factors questions were not considered. This shortcoming was recognised and the trial run of the course in 1988 contained some lectures on people issues. The course team were therefore well prepared and keen to explore the People Organisation and Technology (POT) aspects of computer integration as applied to industrial production. A context was proposed which would allow the inclusion of people from many different backgrounds and which would open up time and space for reflection. The proposal to organise a NATO ASI was therefore welcomed by all concerned.

Computer-integrated Manufacturing James A. Rehg, Henry W. Kraebber, 2001. Written for the technologist or engineer who wants a clear picture of the basic concepts and real world application of computer integrated manufacturing this book's features include systems approach demonstration of how CIM fits into current manufacturing systems and how the technology is used to solve actual industrial problems. Interdisciplinary coverage which includes engineering, business and production considerations for decision making applications. The CIM model used here is consistent with the SME new manufacturing enterprise wheel developed by the Society of Manufacturing Engineers and simulation software the problem sets refer to simulation software so that readers can see a manufacturing operation under realistic production constraints.
