With an evolutionary advancement of Machine Learning, ML algorithms a rapid increase of data volumes and a significant improvement of computation powers machine learning becomes hot in different applications. However because of the nature of black box in ML methods, ML still needs to be interpreted to link human and machine learning for transparency and user acceptance of delivered solutions. This edited book addresses such links from the perspectives of visualisation, explanation, trustworthiness and transparency. The book establishes the link between human and machine learning by exploring transparency in machine learning, visual explanation of ML processes, algorithmic explanation of ML models, human cognitive responses in ML based decision making, human evaluation of machine learning and domain knowledge in transparent ML applications. This is the first book of its kind to systematically understand the current active research activities and outcomes related to human and machine learning. The book will not only inspire researchers to passionately develop new algorithms incorporating human for human centred ML algorithms resulting in the overall advancement of ML but also help ML practitioners proactively use ML outputs for informative and trustworthy decision making. This book is intended for researchers and practitioners involved with machine learning and its applications. The book will especially benefit researchers in areas like artificial intelligence, decision support systems and human computer interaction.

Onomics Ronald Legarski, 2025-02-27

Onomics represents a groundbreaking paradigm shift in how human knowledge is structured, integrated and understood. By establishing a meta framework that transcends traditional academic boundaries, Onomics unifies mathematical principles, linguistic structures, quantum mechanics and philosophical axioms into a single coherent model of understanding. This recursive, self-regulating approach allows us to map the interconnections between different domains of knowledge, ensuring logical consistency and empirical validity across all scales of analysis. Rooted in its etymology (O being existence and nomics law system), Onomics serves as the fundamental framework governing all knowledge, integrating language, atomic structures, quantum mechanics and axiomatic reasoning into an indivisible model of universal intelligence. At its core, Onomics synthesizes Axionomics (The Axiomatic Foundations of Universal Knowledge), Isonomics (The Equilibrium and Isomorphic Correspondence Between Systems), Lanomics (The Linguistic Singularity as the Only Absolute Truth), Atonomics (Atomic Structures as the Fundamental Building Blocks of Reality), Omninomics (The Unification of Sciences, Mathematics and Language into a Recursive Model), Omniomics (The Universal Knowledge Singularity), By leveraging AI-powered reasoning models, Ensuring recursive knowledge validation and epistemological integrity, Quantum interconnectivity modeling, Establishing the dynamic relationships between knowledge structures, Recursive interdisciplinary optimization, Refining knowledge structures through continuous feedback loops, Atomic to linguistic standardization.

Harmonizing physical and informational realities into a single framework Onomics establishes a self sustaining balance driven model where structured reasoning atomic stability and interdisciplinary terminology unify physics mathematics quantum mechanics and linguistic coherence As a recursive all encompassing system Onomics reconciles all systems into a unified totality providing a new era of knowledge organization scientific integration and epistemological standardization

Signal Processing and Machine Learning for Biomedical Big Data Ervin Sejdic,Tiago H.
