

## Bentley® AutoPIPE™ V8i: The Most Productive Tool for Pipe-Stress Analysis

Bentley AutoPIPE V8i is the most productive design and analysis program for calculating piping static stresses, loads, and deflections under static and dynamic load conditions, even to the highest nuclear standards. Costly plant shutdowns caused by pipes moving as they heat up can be avoided with 3D "hot" stress prediction. This functionality can also be used to avoid piping failures during extreme loading conditions like earthquakes. AutoPIPE also includes special features for advanced buried pipeline analysis, wave loading, fluid transients, FRP/GFR or plastic pipe, as well as time-saving integrations with STAAD.Pro and all major plant design systems.

### Design, Object-Based Graphical User Interface

The powerful 3D graphical user interface found in Bentley AutoPIPE V8i enables users to easily create and modify the pipe stress model. Users can simply point-and-click on the graphical model to insert, modify, or delete pipe systems, loads, or components. Other user operations, like model piping, is automatically captured for instant visual feedback. Using AutoPIPE V8i graphical vector systems, users can insert, delete or modify components, supports, pipe properties, temperatures/pressures. In other parameters, users can enter large IP points with one command. Graphical selection of ranges is also used to cut, move, and delete operations. Users can check, reset, or make changes to the input data quickly using interactive grid spreadsheets like Excel. AutoPIPE V8i features up to 30 units or units steps to convert measures, perform "what-if" analysis, or to record quality through design scenarios.

### Advanced Analysis Features for Varied Piping Environments

AutoPIPE V8i provides unique capabilities for process, power, oil, refinery, nuclear, underground, offshore floating, production, storage, and offloading FPSO-platforms and offshore pipeline stress with 2D international piping codes. Advanced AutoPIPE V8i capabilities include nonlinear friction analysis, built-in wave loading, buried pipeline analysis, jacketed piping, thermal loadings, earthquakes (strong-motion recorded plots), FRP/GFR, and GFR plastic piping analysis. It also includes thermal stratification or flowing thermal transient, pipe structure interaction, fluid transient with closure time and relief valve action, external fluid sequencing, nonlinear support gaps and friction and jacketed piping, local stress calculation to WRC, ASME, ENR, ISO, and ASME NQA, and more is available using AutoPIPE Results.

### Graphical Review of Analysis Results

Once a system is analyzed, users can click on the graphical model and instantly view stresses, deflections, forces, and moments. Color-coded results and piping system quality users to quickly identify and highlight critical areas without having to review a substantial amount of data in table form. The 3D interface combination can be viewed with the powerful on-screen rotate grid, select, pan, zoom, and filtering, saving time printing of maximum result tables.

Bentley AutoPIPE includes result detection to avoid costly operation failures.

### Interface with AutoPIPE Vessel, STAAD.Pro, Plant Design, CAD Systems, and ProjectWise

The only solution on the market today that is truly integrated design between piping and structural analysis. AutoPIPE V8i can automatically transfer pipe support loads as well as support complete structures to and from STAAD.Pro V8i, saving months of design time and providing better, more accurate engineering designs. In addition, AutoPIPE can also transfer piping model loads or results to AutoPIPE V8i for final vessel design. Import 3D plant design CAD models from AutoPLANT V8i, PlantSpec V8i, SpacSoft V8i, Intergraph HDS, SmartPlant, ECDMS, Substation, Invenio, Plant 3D, CalHeat, and AutoPIPE V8i. AutoPIPE V8i to pass results of stress loads and stress distributions other models.

AutoPIPE V8i provides users with full mechanical interoperability with Caesar 5, and its models and data can be used by Bentley Navigator or MicroStation alongside any CAD model to support early engineering decision making, perform 3D hot stress scenarios, and reduce design iterations. AutoPIPE also generates fully dimensional stress results with complete data and comprehensive highlighting the pipe stress engineer's changes. In addition, AutoPIPE V8i is integrated with ProjectWise for global collaboration of engineering and CAD data flow on major projects.

### Quality Assurance

AutoPIPE V8i rigorous quality assurance program has passed numerous nuclear and Nuclear Procurement Issues Committee (NPIC) audits for 100% ASME App. B compliance. CSA N286-1-99 ASME NQA-1, and ASME N472 standards, meeting Bentley AutoPIPE V8i one of the few pipe stress programs with a high level of quality. AutoPIPE Nuclear V8i provides design of critical safety systems for ASME Class 1, 2, or 3.
