

BENTLEY AutoPLANT PIPING

A solution for innovative 3D modeling and detailed design

Bentley AutoPLANT Piping XM Edition is an object-based 3D piping design and modeling application that runs on AutoCAD. The system is built on powerful object oriented technology, yet it is easy to use and customize. The software enables users to interactively route and place piping components in a 3D environment. Piping can be used to generate annotated and dimensioned orthographic and report quantities from the 3D model. Piping isometric drawings can be automatically created from the 3D piping model.

AutoPLANT Piping provides state-of-the-art 3D modeling capabilities previously unavailable in any AutoCAD-based package. This capability is achieved through ObjectARX technology, using 3D objects to represent plant components. These custom objects provide superior representations from any viewing perspective while using a fraction of the file size required using standard AutoCAD shapes.

Specification Driven

AutoPLANT utilizes a "spec driven" design approach, which maximizes quality by ensuring compliance with applicable design criteria. Active database links ensure correlation between the graphical and descriptive data in the model.

AutoPLANT includes hundreds of catalogs representing either dimensional standards or manufacturer specific components. These catalogs include hundreds of thousands of items used to create specific specifications for your project requirements. Components placed in a design model are parametric objects with a high degree of intelligence.

Flexible Operation

Component placement in AutoPLANT Piping is an intuitive process used to automate common tasks. Whether placing adjacent piping and components in congested plant areas, or routing over large areas, automated component placement and orientation options reflect standard design conventions and maximize productivity.

Powerful Editing

AutoPLANT is designed with the realities of the typical project in mind. Sections of piping can be edited to change the size or specification. Commonly used assemblies can be saved and inserted in other models or on other projects.

Integrated

AutoPLANT works seamlessly with other Bentley design and information management technologies. The 3D piping model is automatically integrated with the schematic information entered using Bentley Datasheets, P&ID, or instrumentation. Powerful creation and checking tools verify the consistency and completeness of the piping design. The Bentley plant project database can also be integrated with your plant and business systems to make the most of your valuable information investments.
