

This filter operates under pressure. If this unit is not assembled properly or is operated with air in the circulation system, serious bodily injury and/or property damage could occur.

HOW YOUR FILTER WORKS

Your filter is designed to operate for years while requiring minimal maintenance. The corrosion resistant design results in trouble free operation when installed, operated and maintained in accordance with these instructions.

This filter is a diatomaceous earth (D.E.) type regenerative filter and requires D.E. in order to operate. The filter grid cloth is coated with a layer of D.E. which collects dirt as water from the pool passes through the grids. As the dirt load on the grids increases, the pressure inside the filter rises and the flow of water to the pool diminishes. Over time, the filter grids will become clogged with dirt at which time it will be necessary to perform the D.E. regeneration feature.

This regeneration process is a mechanical means of dislodging the D.E./dirt cake from the grids, exposing a clean surface for filtration. The regeneration provides a more efficient use of the D.E. and lengthens the time between filter cleaning and recharging. The regeneration is accomplished by moving a series of wipers across the grids. The handle on top of the filter is used to drive the wipers up and down.

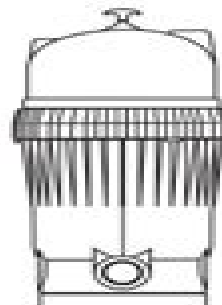

At some point, the D.E. will become completely laden with dirt which will require that the grids be manually cleaned. Regeneration and cleaning will be discussed in detail later.

Please note that clear water is a result of proper filtration as well as proper water chemistry. A filter removes suspended matter but does not sanitize the pool. The pool water must be sanitized and chemically balanced for sparkling water. Pool chemistry is a specialized area and you should consult your local pool service specialist for specific details.

INSTALLATION

- Examine your equipment when received. Notify your dealer or carrier of any damage or missing parts. You should verify that the equipment is the size and model specified.
- Locate the filter on a solid foundation as close to the pool as possible. Space for routine maintenance should be considered. The position of the drain should be such to accommodate adequate drainage away from equipment.
- This filter should be coupled with an appropriately sized pump. A full line of Jacuzzi pool pumps are available for installation with these filters. Ask your dealer to determine the proper pump for your application.
- Assemble piping and pipe fittings to pump and filter. All piping must conform to local and state plumbing and sanitary codes.

TO BE LEFT WITH OWNER

- The following general guidelines should be followed where applicable:

• FOR SOLVENT WELD CONNECTIONS

Rigid or flexible PVC pipe can be used. Pipe ends should be clean and free of any flash caused by the cutting operation. Be sure that the proper adhesive is used on the type of pipe specified.

Recommended Adhesives - These are examples only and are not intended to restrict brands.

PVC-PVC Joint
Uni-Weld Pool-Tite 2000
Suregard Flex 20
IPS Weld-On 705

PVC-ABS Joint
Uni-Weld Pool-Tite 2000
Suregard Weld-All No. 5
IPS Weld-On 754

Note: A primer will assure that adhesive joints are superior. Suregard P-3000 has a purple tracer to qualify in areas where codes specify a primer must be used.

• FOR THREADED CONNECTIONS

Use only Teflon tape or equivalent on threaded plumbing connections. Other pipe compounds may damage threads. We do not recommend the use of silicone or petroleum based compounds. **DO NOT OVERTIGHTEN.** Tighten fittings until snug.

- Long piping runs and elbows restrict flow and should be avoided. For best efficiency, use the fewest possible fittings and the largest possible diameter pipe (1-1/2" minimum).
- If a pool heater is installed, a check valve is recommended between the filter and heater to prevent hot water from entering the filter which may cause damage to the unit.
- Do not install a chlorinator upstream from the filter. Always install a chlorinator downstream with a check valve between the chlorinator and filter.
- Do not store pool chemicals within 10 feet of your filtration equipment. Pool chemicals should be stored in a cool, dry, well ventilated area.
- The maximum operating pressure of this unit is 50 PSI. **NEVER** operate this filter above this pressure or attach to a pump which can generate more than 50 PSI.

FILTER START UP

- 1) Be certain that the filter cover is pushed completely down.
- 2) Check to be sure Ring-Lok nut on filter is tightened to "built-in stops", and drain valve and air vent are closed. If filter Ring-Lok is not tightened to "built-in stops", filter lid could blow off causing injury or property damage.
