Adaptronics and Smart Structures Hartmut Janocha, 2013-11-11 Adaptronics is the term encompassing technical fields that have become known internationally under the names smart materials intelligent structures and smart structures Adaptronics contributes to the optimisation of systems and products It bridges the gap between material and system or product and incorporates the search for multi functional materials and elements and their integration in systems or structures The authors of this book have taken on the task of displaying the current state of the art in this fascinating field The system components actuators sensors and controllers technical fundamentals materials design rules and practical solutions are all described Selected sample applications are also presented and current development trends are demonstrated *Adaptronics and Smart Structures* H. Janocha, 1999 *Dynamics of Advanced Materials and Smart Structures* Kazumi Watanabe, Franz Ziegler, 2013-04-17 Two key words for mechanical engineering in the future are Micro and Intelligence It is well known that the leadership in the intelligence technology is a matter of vital importance for the future status of industrial society and thus national research projects for intelligent materials structures and machines have started not only in advanced countries but also in developing countries Materials and structures which have self sensing diagnosis and actuating systems are called intelligent or smart and are of growing research interest in the world In this situation the IUTAM symposium on Dynamics of Advanced Materials and Smart Structures was a timely one Smart materials and structures are those equipped with sensors and actuators to achieve their designed performance in a changing environment They have complex structural properties and mechanical responses Many engineering problems such as interface and edge phenomena mechanical and electro magnetic interaction coupling and sensing actuating and control techniques arise in the development of intelligent structures Due to the multi disciplinary nature of these problems all of the classical sciences and technologies such as applied mathematics material science solid and fluid mechanics control techniques and others must be assembled and used to solve them IUTAM well understands the importance of this emerging technology An IUTAM symposium on Smart Structures and Structronic Systems Chaired by U **Smart Structures** Vinod K. Wadhawan, 2007-10-18 A structure is an assembly that serves an engineering function A smart structure is one that serves this function smartly i.e. by responding adaptively in a pre designed useful and efficient manner to changing environmental conditions Adaptive behaviour of one or more materials constituting a smart structure requires nonlinear response This book describes the three main types of nonlinear response materials ferroic materials soft materials and nanostructured materials Information processing by biological and artificial smart structures is also discussed A smart structure typically has sensors actuators and a control system Progress in all these aspects of smart structures has learnt heavily on mimicking Nature and the all important notion in this context has been that of evolution Artificial Darwinian and Lamarckian evolution holds the key to the development of truly smart structures Modestly intelligent robots are already on the horizon Projections about the low
