And Alien Introgression Wheat Cytogenetics Molecular:

Alien Introgression in Wheat Márta Molnár-Láng,Carla Ceoloni,Jaroslav Doležel,2015-11-20 This book provides an overview of the latest advancements in the field of alien introgression in wheat The discovery and wide application of molecular genetic techniques including molecular markers in situ hybridization and genomics has led to a surge in interspecific and intergeneric hybridization in recent decades The work begins with the taxonomy of cereals especially of those species which are potential gene sources for wheat improvement The text then goes on to cover the origin of wheat breeding in connection with alien introgressions and the problems of producing intergeneric hybrids and backcross derivatives These problems can include crossability sterility and unequal chromosome transmission The work then covers alien introgressions according to the related species used as well as new results in the field of genomics of wild wheat relatives and introgressions *Alien Introgression in Wheat* Márta Molnár-Láng,Carla Ceoloni,Jaroslav Doležel,2015 This book provides an overview of the latest advancements in the field of alien introgression in wheat The discovery and wide application of molecular genetic techniques including molecular markers in situ hybridization and genomics has led to a surge in interspecific and intergeneric hybridization in recent decades The work begins with the taxonomy of cereals especially of those species which are potential gene sources for wheat improvement The text then goes on to cover the origin of wheat breeding in connection with alien introgressions and the problems of producing intergeneric hybrids and backcross derivatives These problems can include crossability sterility and unequal chromosome transmission The work then covers alien introgressions according to the related species used as well as new results in the field of genomics of wild wheat relatives and introgressions **Chromosome Manipulation for Plant Breeding Purposes** Pilar Prieto,2021-01-29 The ability to exploit the potential of wild relatives carrying beneficial traits is a major goal in breeding programs However it relies on the possibility of the chromosomes from the crop and wild species in interspecific crosses to recognize associate and undergo crossover formation during meiosis the cellular process responsible for producing gametes with half the genetic content of their parent cells Unfortunately in most cases a barrier exists preventing successful hybridization between the wild and crop chromosomes Understanding the mechanisms controlling chromosome associations during meiosis are of great interest in plant breeding and will allow chromosome manipulation to introduce genetic variability from related species into a crop In addition to interspecific hybrids other materials such as natural and synthetic polyploids and introgression lines derived from allopolyploids among others are powerful tools in the framework of plant breeding For example an extra pair of alien chromosomes in the full genome complement of a crop species has been frequently used as a first step to access genetic variation from the secondary gene pool in breeding programs In addition such introgression lines are also pivotal in the study of interspecific genetic interactions in the chromosomal location of genetic markers and in the study of chromosome structure and behavior in somatic and meiotic cells Contained in this Special Issue are accounts of original research

including new tools to identify chromosome introgressions and the development and characterization of introgression lines and interspecific hybrids carrying desirable agronomic traits for plant breeding purposes Also included are reviews about the chromosome engineering of tropical cash crops and the effect of chromosome structure on chromosome associations and recombination during meiosis to allow chromosome manipulation in the framework of plant breeding [**Plant Genetics and Biotechnology in Biodiversity**](#) Rosa Rao, Giandomenico Corrado, 2018-08-09 This book is a printed edition of the Special Issue Plant Genetics and Biotechnology in Biodiversity that was published in Diversity

Wheat Evolution and Domestication

Moshe Feldman, Avraham A. Levy, 2023-10-03 This open access book covers a century of research on wheat genetics and evolution starting with the discovery in 1918 of the accurate number of chromosomes in wheat We re evaluate classical studies that are pillars of the current knowledge considering recent genomic data in the wheat group comprising 31 species from the genera *Amblyopyrum* *Aegilops* *Triticum* and other more distant relatives For these species we describe morphology, ecogeographical distribution, phylogeny as well as cytogenetic and genomic features For crops we also address evolution under human selection namely pre domestication, cultivation and domestication We re examine the genetic and archeological evidence of where, when and how domestication occurred We discuss unique aspects of genome evolution and maintenance under polyploidization in natural and synthetic allopolyploids of the wheat group Finally we propose some thoughts on the future prospects of wheat improvement As such it can be of great interest to wheat researchers and breeders as well as to plant scientists and students interested in plant genetics, evolution, domestication and polyploidy [**Introgression Breeding in Cultivated Plants**](#) Jaime Prohens, Pietro Gramazio, Mariola Plazas, Laura Toppino, 2021-11-24

Blight in Wheat Ronell Joey Carcallas Cainong, 2014 Hexaploid wheat *Triticum aestivum* L 2n 6x 42 AABBDD is a recent polyploid and originates from a limited number of founder genotypes Domestication bottlenecks further reduced genetic diversity The wheat gene pool which consists of landraces and wild relatives such as rye *Secale cereale* L *Leymus racemosus* Tien and *Elymus tsukushiensis* Honda is a rich source of genetic diversity Agronomically important traits can be transferred from these gene pools to wheat through chromosome engineering This dissertation describes chromosome engineering and pre breeding efforts for resistance to Hessian fly and Fusarium head blight FHB in wheat The germplasm with a whole arm rye translocation T2BS 2R 2L contains the highly effective Hessian fly resistance gene H21 and an unnamed powdery mildew resistance gene Directed chromosome engineering was used to shorten the whole arm rye segment The recovered wheat rye recombinant chromosome T2BS 2BL 2R 2L had a shorter rye segment but still contained the H21 gene and was transferred through backcrosses to adapted winter and spring wheat cultivars This study released the germplasm KS09WGGRG51 which is used in wheat breeding programs in the U S A Two novel sources of FHB resistance were identified in *L racemosus* and *E tsukushiensis* *Fhb3* present in the wheat *L racemosus* T7AL 7Lr 1S Robertsonian translocation was transferred into the adapted Kansas winter wheat cultivar Fuller The wheat *E tsukushiensis* disomic addition translocation line confers FHB resistance *Ph1b* induced homoeologous recombination was used to produce wheat *E tsukushiensis* recombinants The distal and interstitial recombinants were identified using molecular markers and genomic *in situ* hybridization GISH A combination of molecular cytogenetic analyses determined that the distal recombinant involved wheat chromosome 1A and a small distal segment originating from the *E tsukushiensis* chromosome arm 1E superscript ts 1S resulting in the recombinant chromosome T1AL 1AS 1E superscript ts 1S The interstitial recombinant involves an unidentified wheat chromosome and appears to be highly rearranged Both recombinants confer high levels of type II FHB resistance resistance to spread within the head based on point inoculations in the greenhouse To date these two recombinants are the smallest alien introgression with FHB resistance in common wheat This germplasm material has been released as KS14WGRC61 The distal recombinant can be used directly for breeding of FHB resistant cultivars worldwide
