

The figure below shows the various parts of a mushroom, including those below the ground. We usually think of a mushroom as its umbrella-shaped reproductive structure which appears suddenly, usually after a rain. The vegetative body is the filamentous mycelium in the ground, composed of many branching hyphae. Hyphae mass together to form the stipe, cap, and gills of the familiar mushroom. Spores are discharged from the gill surfaces. The veil-like annulus below the cap was attached to the rim of the cap and covered the gills before the mushroom opened.

On the diagram of the mature mushroom below, label the hyphae, stipe, annulus, cap, gills, and spores ("dot-in" some, as if they are falling from the gills).

Section (slice) a mushroom lengthwise through the stipe and cap. Examine the cut surface with a stereoscope to see if you can detect the many hyphae massed together to form the reproductive structure. Examine the gills and notice how they are produced on the lower side of the cap. Draw the sectioned mushroom in the space below and label the stipe, annulus (if present), cap, and gills.

Lateral view of the sectioned mushroom.
