Emilio Frazzoli, Tomas Lozano-Perez, Nicholas Roy, Daniela Rus, 2013-02-14 Algorithms are a fundamental component of robotic systems. Robot algorithms process inputs from sensors that provide noisy and partial data build geometric and physical models of the world plan high and low level actions at different time horizons and execute these actions on actuators with limited precision. The design and analysis of robot algorithms raise a unique combination of questions from many fields including control theory computational geometry and topology geometrical and physical modeling reasoning under uncertainty probabilistic algorithms game theory and theoretical computer science. The Workshop on Algorithmic Foundations of Robotics (WAFR) is a single track meeting of leading researchers in the field of robot algorithms. Since its inception in 1994 WAFR has been held every other year and has provided one of the premiere venues for the publication of some of the field's most important and lasting contributions. This book contains the proceedings of the tenth WAFR held on June 13-15 2012 at the Massachusetts Institute of Technology. The 37 papers included in this book cover a broad range of topics from fundamental theoretical issues in robot motion planning control and perception to novel applications.

Algorithmic Foundations of Robotics, 1994 **Algorithmic foundations of robotics**, [Algorithmic Foundations of Robotics IX](#) David Hsu, Volkan Isler, Jean-Claude Latombe, Ming C. Lin, 2010-11-18 Robotics is at the cusp of dramatic transformation. Increasingly complex robots with unprecedented autonomy are finding new applications from medical surgery to construction to home services. Against this background the algorithmic foundations of robotics are becoming more crucial than ever in order to build robots that are fast safe reliable and adaptive. Algorithms enable robots to perceive plan control and learn. The design and analysis of robot algorithms raise new fundamental questions that span computer science electrical engineering mechanical engineering and mathematics. These algorithms are also finding applications beyond robotics for example in modeling molecular motion and creating digital characters for video games and architectural simulation. The Workshop on Algorithmic Foundations of Robotics (WAFR) is a highly selective meeting of leading researchers in the field of robot algorithms. Since its creation in 1994 it has published some of the field's most important and lasting contributions. This book contains the proceedings of the 9th WAFR held on December 13-15 2010 at the National University of Singapore.
