Radionov,Dmitrii V. Ulrikh,Svetlana S. Timofeeva,Vladimir N. Alekhin,Vadim R. Gasiyarov,2022-03-02 This book highlights recent findings in civil and environmental engineering and urban planning and provides an overview of the state of the art in these fields mainly in Russia and Eastern Europe A broad range of topics and issues in modern engineering are discussed including construction buildings and structures advanced materials innovative technology methods and techniques in civil engineering heating gas supply water supply and sewerage foundation engineering BIM structural reliability durability and monitoring special and unique structures construction bridge tunnel road railway engineering design and construction of hydraulic structures concrete engineering urban regeneration and sustainable development urban transport system engineering structure safety and disaster prevention water resources engineering water and wastewater treatment recycling and reuse of wastewater etc The volume gathers selected papers from the 5th International Conference on Construction Architecture and Technosphere Safety ICCATS held in Sochi Russia in September 2021 The authors are experts in various fields of engineering and all papers have been carefully reviewed

Foundations of Optimization Osman Güler,2010-08-03 This book covers the fundamental principles of optimization in finite dimensions It develops the necessary material in multivariable calculus both with coordinates and coordinate free so recent developments such as semidefinite programming can be dealt with

Reinforcement Learning for Optimal Feedback Control Rushikesh Kamalapurkar,Patrick Walters,Joel Rosenfeld,Warren Dixon,2018-05-10 Reinforcement Learning for Optimal Feedback Control develops model based and data driven reinforcement learning methods for solving optimal control problems in nonlinear deterministic dynamical systems In order to achieve learning under uncertainty data driven methods for identifying system models in real time are also developed The book illustrates the advantages gained from the use of a model and the use of previous experience in the form of recorded data through simulations and experiments The book's focus on deterministic systems allows for an in depth Lyapunov based analysis of the performance of the methods described during the learning phase and during execution To yield an approximate optimal controller the authors focus on theories and

methods that fall under the umbrella of actor critic methods for machine learning They concentrate on establishing stability during the learning phase and the execution phase and adaptive model based and data driven reinforcement learning to assist readers in the learning process which typically relies on instantaneous input output measurements This monograph provides academic researchers with backgrounds in diverse disciplines from aerospace engineering to computer science who are interested in optimal reinforcement learning functional analysis and functional approximation theory with a good introduction to the use of model based methods The thorough treatment of an advanced treatment to control will also interest practitioners working in the chemical process and power supply industry

Classical And Modern Optimization

Guillaume Carlier,2022-03-16 The quest for the optimal is ubiquitous in nature and human behavior The field of mathematical optimization has a long history and remains active today particularly in the development of machine learning Classical and Modern Optimization presents a self contained overview of classical and modern ideas and methods in approaching optimization problems The approach is rich and flexible enough to address smooth and non smooth convex and non convex finite or infinite dimensional static or dynamic situations The first chapters of the book are devoted to the classical toolbox topology and functional analysis differential calculus convex analysis and necessary conditions for differentiable constrained optimization The remaining chapters are dedicated to more specialized topics and applications Valuable to a wide audience including students in mathematics engineers data scientists or economists Classical and Modern Optimization contains more than 200 exercises to assist with self study or for anyone teaching a third or fourth year optimization class

Mathematics for the Analysis of Algorithms Daniel H. Greene,Donald E. Knuth,2007-10-05 This monograph collects some fundamental mathematical techniques that are required for the analysis of algorithms It builds on the fundamentals of combinatorial analysis and complex variable theory to present many of the major paradigms used in the precise analysis of algorithms emphasizing the more difficult notions The authors cover recurrence relations operator methods and asymptotic analysis in a format that is concise enough for easy reference yet detailed enough for those with little background with the material

Modeling, Simulation and Optimization of Complex Processes HPSC 2018 Hans Georg Bock,Willi Jäger,Ekaterina Kostina,Hoang Xuan Phu,2020-12-01 This proceedings volume highlights a selection of papers presented at the 7th International Conference on High Performance Scientific Computing which took place in Hanoi Vietnam during March 19 23 2018 The conference has been organized by the Institute of Mathematics of the Vietnam Academy of Science and Technology the Interdisciplinary Center for Scientific Computing IWR of Heidelberg University and the Vietnam Institute for Advanced Study in Mathematics The contributions cover a broad interdisciplinary spectrum of scientific computing and showcase recent advances in theory methods and practical applications Subjects covered include numerical simulation methods for optimization and control machine learning parallel computing and software development as well as the applications of scientific computing in mechanical engineering aerospace engineering environmental physics decision
