Ecological Succession:

Linking Restoration and Ecological Succession Lawrence R. Walker, Joe Walker, Richard J. Hobbs, 2007-10-16 While studies of restoration and ecological succession have been published independently there is much overlap between these approaches that has not been adequately explored. Linking Restoration and Ecological Succession integrates practical information from restoration projects around the world with the latest developments in successional theory. This innovative book recognizes the critical roles of disturbance ecology, landscape ecology, ecological assembly, invasion biology, ecosystem health, and historical ecology in habitat restoration and argues that restoration within a successional context will best utilize the lessons from each of these disciplines. To successfully restore an ecosystem that needs minimal care, the temporal dynamics of successional processes must be considered. By re-examining restoration in the light of succession, the authors hope to encourage the development of new approaches to the practice of restoration supported by solid ecological principles.

Directing Ecological Succession J.O. Luken, 1990-09-30 Succession, the tendency of plant communities to change through time, presents a challenge to those who must satisfy goals established for the use and preservation of natural resources. The practical application of what is known about successional changes has not advanced quickly; subsequently, plant community management is often carried out without recourse to the latest scientific data. **Ecological Succession** Frank B. Golley, 1977 Good. No Highlights. No Markup. All pages are intact. Slight shelfwear may have the corners slightly dented; may have slight color changes; slightly damaged spine. **Plant Succession** D.C. Glenn-Lewin, R.K. Peet, T.T. Veblen, 1992-11-30 Succession is the term used to describe the phenomenon of changes in vegetational types in both time and space. The subject of the colonization and exploitation of new areas by plants is a key one in ecology and this book summarizes the theoretical arguments currently raging about the topic. **Ecological Succession** Mary Luzier, 2017-09-27 Ecological succession is the process of change in the species structure of an ecological community over time. It is a phenomenon or process by which an ecological community undergoes more or less orderly and predictable changes following a disturbance or the initial colonization of a new habitat. Succession may be initiated either by formation of new unoccupied habitat such as from a lava flow or a severe landslide or by some form of disturbance of a community such as from a fire, severe windthrow or logging. Succession that begins in new habitats uninfluenced by pre-existing communities is called primary succession; whereas succession that follows disruption of a pre-existing community is called secondary succession.

Forest Succession D. C. West, H. H. Shugart, D. F. Botkin, 2012-12-06 Succession, nothing in plant community or ecosystem ecology has been so elaborated by terminology, so much reviewed and yet so much the center of controversy. In a general sense, every ecologist uses the concept in teaching and research, but no two ecologists seem to have a unified concept of the details of succession. The word was used by Thoreau to describe from a naturalist's point of view the general changes observed during the transition of an old field to a forest. As data accumulated, a lengthy taxonomy of succession developed.

around early twentieth century ecologists such as Cooper Clements and Gleason Now nearer the end of the century and after much discussion concerning the nature of vegetation communities where do ecologists stand with respect to knowledge of ecological succession The intent of this book is not to rehash classic philosophies of succession that have emerged through the past several decades of study but to provide a forum for ecologists to present their current research and present day interpretation of data To this end we brought together a group of scientists currently studying terrestrial plant succession who represent research experience in a broad spectrum of different ecosystem types The results of that meeting led to this book which presents to the reader a unique summary of contemporary research on forest succession *Environmental Science* Bernard J. It explores cutting edge topics in the field drawing on and highlighting the links between theory and the latest empirical studies. The sections are structured around a series of key topics including behavioral ecology, species interactions, population ecology, food webs, communities and ecosystems, and broad patterns in nature. Chapters progress logically from the small scale to the large, from individual species through to species interactions, populations and communities. Application sections at the end of each chapter outline the practicality of ecological concepts and show how ecological information and concepts can be useful in agriculture, horticulture and forestry. Each chapter ends with a summary providing a brief recap followed by a set of questions and discussion topics designed to encourage independent and creative thinking **WEST MICHIGAN ENVIRONMENTAL ACTION COUNCIL V MICHIGAN NATURAL RESOURCES COMMISSION, 405 MICH 741 (1979)**, 1979 60800 **Animal Communities in Temperate America** Victor Ernest Shelford, 1913
