Blended Learning Francine S. Glazer, 2023-07-03 This is a practical introduction to blended learning, presenting examples of implementation across a broad spectrum of disciplines. For faculty unfamiliar with this mode of teaching, it illustrates how to address the core challenge of blended learning to link the activities in each medium so that they reinforce each other to create a single unified course and offers models they can adapt. Francine Glazer and the contributors to this book describe how they integrate a wide range of pedagogical approaches in their blended courses, use groups to build learning communities, and make the online environment attractive to students. They illustrate under what circumstances particular tasks and activities work best online or face to face and when to incorporate synchronous and asynchronous interactions. They introduce the concept of layering the content of courses to appropriately sequence material for beginning and experienced learners and to ensure that students see both the online and the face to face components as being equal in value and devote equal effort to both modalities. The underlying theme of this book is encouraging students to develop the skills to continue learning throughout their lives. By allowing students to take more time and reflect on the course content, blended learning can promote more student engagement and consequently deeper learning. It appeals to today's digital natives who are accustomed to using technology to find and share information, communicate and collaborate, and also enables non-traditional students to juggle their commitments more efficiently and successfully.
