sustainable systems Any sustainable development has to reconcile conflicting economic and environmental objectives and criteria The science of multiple criteria decision making has a lot to offer in addressing this need Decision making with multiple conflicting criteria is the topic of research that is at the heart of the International Society of Multiple Criteria Decision Making This book is based on selected papers presented at the societies 19th International Conference held at The University of Auckland New Zealand from 7th to 12th January 2008 under the theme MCDM for Sustainable Energy and Transportation Systems Advanced Electrical Drives Rik De Doncker, Duco W.J. Pulle, André Veltman, 2010-11-30 Electrical drives convert in a controlled manner electrical energy into mechanical energy Electrical drives comprise an electrical machine i.e. an electro mechanical energy converter a power electronic converter i.e. an electrical to electrical converter and a controller communication unit Today electrical drives are used as propulsion systems in high speed trains elevators escalators electric ships electric forklift trucks and electric vehicles Advanced control algorithms mostly digitally implemented allow torque control over a high bandwidth Hence precise motion control can be achieved Examples are drives in robots pick and place machines factory automation hardware etc Most drives can operate in motoring and generating mode Wind turbines use electrical drives to convert wind energy into electrical energy More and more variable speed drives are used to save energy for example in air conditioning units compressors blowers pumps and home appliances Key to ensure stable operation of a drive in the aforementioned applications are torque control algorithms In *Advanced Electrical Drives* a unique approach is followed to derive model based torque controllers for all types of Lorentz force machines i.e. DC synchronous and induction machines The rotating transformer model forms the basis for this generalized modeling approach that ultimately leads to the development of universal field oriented control algorithms In case of switched reluctance machines torque observers are proposed to implement direct torque algorithms From a didactic viewpoint tutorials are included at the end of each chapter The reader is encouraged to execute these tutorials to familiarize him or herself with all aspects of drive technology Hence *Advanced Electrical Drives* encourages learning by doing Furthermore the experienced drive specialist may find the simulation tools useful to design high performance controllers for all sorts of electrical drives

Development of Adaptive Speed Observers for Induction Machine System Stabilization Ahmed A. Zaki Diab, Abo-Hashima M. Al-Sayed, Hossam Hefnawy Abbas Mohammed, Yehia Sayed Mohammed, 2020-01-03 This book describes the development of an adaptive state observer using a mathematical model to achieve high performance for sensorless induction motor drives This involves first deriving an expression for a modified gain rotor flux observer with a parameter adaptive scheme to estimate the motor speed accurately and improve the stability and performance of sensorless vector controlled induction motor drives This scheme is then applied to the controls of a photovoltaic motor water pumping system which results in improved dynamic performance under different operating conditions The book also presents a robust speed controller design for a sensorless vector controlled induction motor drive system based on H theory which overcomes the problems of the
