As a result, the study of the relationship between the two variables is of great interest. In this paper, we propose a new approach to the study of the relationship between the two variables. The approach is based on the use of a new type of neural network, called a "recurrent neural network" (RNN). The RNN is a type of neural network that is able to learn the temporal dependencies between the two variables. The RNN is able to learn the temporal dependencies between the two variables by using a "recurrent" mechanism. The recurrent mechanism is a mechanism that allows the RNN to remember the previous states of the two variables and to use this information to predict the future states of the two variables.
