Over the last ten years or so, researchers in various areas (Hodge theory, algebraic K theory, polylogarithms, automorphic forms, L functions, ell-adic representations, trigonometric sums, and algebraic cycles) have discovered that an enlarged and in part conjectural theory of mixed motives indicates and explains phenomena appearing in each area. Thus the theory holds the potential of enriching and unifying these areas. This is one of two volumes containing the revised texts of nearly all the lectures presented.
