Spring Field Trip ,1952 *Perspectives on the Marine Animal Forests of the World* Sergio Rossi,Lorenzo Bramanti,2021-02-06 Marine Animal Forests MAFs are spread all over the world Composed by suspension feeding organisms e g corals gorgonians sponges bryozoans bivalves etc MAFs constitute a vast number of marine ecosystems such as coral reefs cold water corals sponge grounds bivalve beds etc The surface covered by these systems is prominent at the scale of the oceans of the planet though poorly known In a previous book Marine Animal Forests the ecology of benthic biodiversity

hotspots several aspects of the MAFs were described and discussed building the basis for a holistic approach with the aim of putting these shallow and deep sea ecosystems under a common umbrella The main target of the present book is to identify and address important topics which were not covered in the previous three volumes Bryozoans or Polychaeta for example are treated in this volume as well as hydrothermal vents ecosystems and submarine caves the chemical ecology in MAFs or the nursery effect on these ecosystems The vastity of the MAF concept opens new insights in the biology physiology biodiversity of the organisms structuring these highly biodiverse ecosystems and on the dangers threatening them such as microplastics or the role of invasive species as an impact of their trophic ecology or distribution In a fast changing world in which the complexity of MAFs is at risk we propose an in depth analysis of many aspects that may be inspirational for future research lines in marine biology and ecology
