**Advances in the development and application of deep eutectic solvents** Maria Luisa Di Gioia, Manoj B. Gawande, Ana Rita Duarte, 2024-02-09 The continuous effort to perform a more sustainable chemistry has led to the development of new materials that accomplish the principles of green chemistry In this context deep eutectic solvents DESs have arisen as a new generation of solvents that respond well to most of the characteristics that an ideal green solvent must possess they are easy and cheap to prepare stable easy to handle they show chemical stability non flammability and conductivity separable from the reaction products biodegradable and safe for both humans and the environment At the same time they show chemical physical properties similar to ionic liquids such as low volatility conductivity and high solvent power These characteristics mean that DESs are today classified as 21st century solvents DESs have been raising a lot of attention and a sharp increase of their applications in numerous sectors of chemistry they are mainly used as alternative solvents and/or catalysts for various organic transformations including metal catalyzed reactions biotransformations polymerization in sample preparation and analytical techniques as well as in the design of pharmaceutical formulations and drug delivery systems
