Designing Field Studies for Biodiversity Conservation Peter Feinsinger,2001-07-01 Anyone working in biodiversity conservation or field ecology should understand and utilize the common sense process of scientific inquiry observing surroundings framing questions answering those questions through well designed studies and in many cases applying results to decision making Yet the interdisciplinary nature of conservation means that many workers are not well versed in the methods of science and may misunderstand or mistrust this indispensable tool Designing Field Studies for Biodiversity Conservation addresses that problem by offering a comprehensible practical guide to using scientific inquiry in conservation work In an engaging and accessible style award winning tropical ecologist and teacher Peter Feinsinger melds concepts methods and intellectual tools into a unique approach to answering environmental questions through field studies Focusing on the fundamentals of common sense independent thinking and natural history he considers framing the question and designing the study interpreting and applying results through judicious use of statistical inference taking into account the natural history of plants animals and landscapes monitoring and assessing progress through approaches such as bioindicator

species or species diversity measures helping other interested parties park guards local communities school teachers use scientific inquiry in addressing their own concerns Detailed appendixes explain technical issues while numerous sidebars and illustrations provide important background and thought provoking exercises Throughout the author challenges the reader to integrate conceptual thinking with on the ground practice in order to make conservation truly effective Feinsinger concentrates on examples from Latin America but stresses that the approach applies to local conservation concerns or field biology questions in any landscape Designing Field Studies for Biodiversity Conservation is an essential handbook for staff and researchers working with conservation institutions or projects worldwide as well as for students and professionals in field ecology wildlife biology and related areas

Conservation Biology for All Navjot S. Sodhi,Paul R.

Ehrlich,2010-01-08 Conservation Biology for All provides cutting edge but basic conservation science to a global readership A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting edge conservation knowledge as widely as possible Important topics such as balancing conversion and human needs climate change conservation planning designing and analyzing conservation research ecosystem services endangered species management extinctions fire habitat loss and invasive species are covered Numerous textboxes describing additional relevant material or case studies are also included The global biodiversity crisis is now unstoppable

what can be saved in the developing world will require an educated constituency in both the developing and developed world Habitat loss is particularly acute in developing countries which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found Sadly developing world conservation scientists have found it difficult to access an authoritative textbook which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest There is now an urgent need to educate the next generation of scientists in developing countries so that they are in a better position to protect their natural resources

Setting Biodiversity Conservation Priorities for India, 2000 **Linking Biodiversity Conservation and Poverty Alleviation**, 2010 In 2002 the Conference of Parties

set a target to achieve by 2010 a significant reduction of the current rate of biodiversity loss at the global regional and national level as a contribution to poverty alleviation and the benefit of all life on Earth We have failed to meet the 2010 target and the latest MDG report notes the grave consequences of this for poor people The irreparable loss of biodiversity will also hamper efforts to meet other MDGs especially those related to poverty hunger and health by increasing the vulnerability of the poor and reducing their options for development The CBD has long emphasised the need for integrating DEPENDENCE OF THE POOR ON BIODIVERSITY This review focuses on the question which groups of the differentiated poor depend in which types of ways on different elements of biological diversity The methodology for the review included an examination of the peer reviewed literature as published in journals and books and an examination of websites and portals of major organisations forums working on biodiversity conservation and poverty alleviation It may be too simplistic to say that the majority of the world's biodiversity is in the South which is also where the poorer countries of the world are Schei 2007

Matiku 2008 and it is certainly not the case that significant biodiversity only occurs in areas of poverty **Cultural and Spiritual Values of Biodiversity** United Nations Environment Programme, 1999 Weaving together philosophical, historical, legal, scientific and personal viewpoints, this book gives a rich sample of the vast web which makes up our cultural, spiritual and social diversity. The volume highlights the central importance of cultural and spiritual values in the appreciation and preservation of all life and argues that these values give us a true reflection of worth. It demonstrates how many cultures see Nature as an extension of society and how sensitive stewardship is an integral part of existence. The book covers language and how cognition and speech encode indigenous knowledge systems. These are critical for preservation of diversity, the complex issue of indigenous people and the problems of preserving their relationships both with and within their societies. Voices of the world express concern and disquiet over the declining world diversity. Holistic health practices where environment and diet are integrated into indigenous medical health systems, the importance of developing effective intellectual property rights and territorial and land rights to enhance and maintain local control. This book arose out of the Global Biodiversity Assessment GBA, a massive review of current knowledge in the broad field of biological diversity commissioned by United Nations Environmental Programme UNEP.
