## **Biofilms In The Food Environment:**

Biofilms in the Food Environment Hans P. Blaschek, Hua H. Wang, Meredith E. Agle, 2008-02-28 Biofilms in the Food Environment examines biofilms produced by food borne microorganisms the risks associated with biofilms in the food chain the beneficial applications of biofilms in the food environment and approaches for biofilm removal to improve sanitation and safety in the food environment Specifically this book provides an introduction into the emerging and exciting field of biofilm research in the food environment a summary of advanced knowledge in medical microbiology and engineering and its applicability to food biofilm research and potential directions for biofilm intervention and industrial beneficial applications that may have direct impact on food safety and public health Biofilms in the Food Environment is intended to serve as a comprehensive reference source for the food science community including industry scientists university researchers and regulatory agencies Not only are general concepts regarding biofilms in the food environment covered but also included are in depth reviews on biofilm structures the correlation between strain virulence and biofilm forming abilities cutting edge technologies to investigate microbial compositions in ecosystems and cell to cell interactions and updated findings on molecular attributes and mechanisms involved in biofilm development that might lead to targeted approaches for biofilm prevention and removal The topics covered and approaches discussed are truly interdisciplinary in nature

Biofilms in the Food and Beverage Industries P M Fratamico, B A Annous, N W Guenther, 2009-09-22 When bacteria attach to and colonise the surfaces of food processing equipment and foods products themselves there is a risk that biofilms may form Human pathogens in biofilms can be harder to remove than free microorganisms and may therefore pose a more significant food safety risk Biofilms in the food and beverage industries reviews the formation of biofilms in these sectors and best practices for their control The first part of the book considers fundamental aspects such as molecular mechanisms of biofilm formation by food associated bacteria and methods for biofilm imaging quantification and monitoring Part two then reviews biofilm formation by different microorganisms Chapters in Part three focus on significant issues related to biofilm prevention and removal Contributions on biofilms in particular food industry sectors such as dairy and red meat processing and fresh produce complete the collection With its distinguished editors and international team of contributors Biofilms in the food and beverage industries is a highly beneficial reference for microbiologists and those in industry responsible for food safety Considers fundamental aspects concerning the ecology and characteristics of biofilms and considers methods for

their detection Examines biofilm formation by different micro organisms such as salmonella and food spoilage Discusses specific issues related to biofilm prevention and removal such as cleaning and sanitation of food contact surfaces and food processing equipment

**Good Hygiene Practices and Their Prevention of Biofilms in the Food Industry** Roy Fink, 2019-07-12 This book highlights the importance of hygiene in the food industry with regard to biofilms which can be found on the contact materials of various food production facilities including bakery brewing seafood processing and dairy and meat processing Good hygiene practices in such facilities can prevent microbial niches and harbourage sites facilitate cleaning and disinfection maintain or increase product shelf life and improve food safety This book provides essential information on the updated information on biofilm growth conditions detection methods and prevention and control strategies

Biofilms from a Food Microbiology Perspective: Structures, Functions and Control Strategies Avelino Alvarez-Ordóñez, Romain Briandet, 2017-03-17

Materials and equipment in food processing industries are colonized by surface associated microbial communities called biofilms In these biostructures microorganisms are embedded in a complex organic matrix composed essentially of polysaccharides nucleic acids and proteins This organic shield contributes to the mechanical biofilm cohesion and triggers tolerance to environmental stresses such as dehydration or nutrient deprivation Notably cells within a biofilm are more tolerant to sanitation processes and the action of antimicrobial agents than their free living or planktonic counterparts Such properties make conventional cleaning and disinfection protocols normally not effective in eradicating these biocontaminants Biofilms are thus a continuous source of persistent microorganisms including spoilage and pathogenic

microorganisms leading to repeated contamination of processed food with important economic and safety impact Alternatively in some particular settings biofilm formation by resident or technological microorganisms can be desirable due to possible enhancement of food fermentations or as a means of bioprotection against the settlement of pathogenic microorganisms In the last decades substantial research efforts have been devoted to unravelling mechanisms of biofilm formation deciphering biofilm architecture and understanding microbial interactions within those ecosystems However biofilms present a high level of complexity and many aspects remain yet to be fully understood A lot of attention has been also paid to the development of novel strategies for preventing or controlling biofilm formation in industrial settings Further research needs to be focused on the identification of new biocides effective against biofilm associated microorganisms the development of control strategies based on the inhibition of cell to cell communication and the potential use of bacteriocins bacteriocin producing bacteria phage and natural antimicrobials as anti biofilm agents among others This Research Topic aims to provide an avenue for dissemination of recent advances within the biofilms field from novel knowledge on mechanisms of biofilm formation and biofilm architecture to novel strategies for biofilm control in food industrial settings
