Biological And Biomedical Infrared Spectroscopy Volume 2 Advances In Biomedical Spectroscopy:

Biological and Biomedical Infrared Spectroscopy A. Barth, P.I. Haris, 2009-09-02 Infrared spectroscopy has a significant role to play in the analysis of the vast number of genes and proteins being identified by the various genomic sequencing projects. This book gives an overview of the field. It is intended for use by research scientists already active in the use of biological infrared spectroscopy

Brain Damage Alina Gonzalez-Quevedo, 2012-03-16 Brain Damage Bridging Between Basic Research and Clinics represents a collection of papers in an attempt to provide an up to date approach to the fascinating topic of brain damage in different pathological situations combining the authors personal experiences with current knowledge in this field. In general the necessary link between basic and clinical neurosciences is highlighted as it is through this interaction that the theoretical understanding of the pathophysiological mechanisms can be successfully translated into better ways to diagnose treat and prevent the catastrophic events that occur when the brain suffers from external or internal noxious events. The book spans different aspects of brain injury starting from damage occurring in the fetal and child brain followed by different neurodegenerative processes. Attention is also focused on the negative effects of drug addictions and sleep deprivation on the brain as well as on the early assessment of brain injury for preventive strategies employing sensitive biomarkers

Computational Intelligence and Efficiency in Engineering Systems Grzegorz Borowik, Zenon Chaczko, Witold Jacak, Tadeusz Łuba, 2015-03-10 This carefully edited and reviewed volume addresses the increasingly popular demand for seeking more clarity in the data that we are immersed in. It offers excellent examples of the intelligent ubiquitous computation as well as recent advances in systems engineering and informatics. The content represents state of the art foundations for researchers in the domain of modern computation computer science system engineering and networking with many examples that are set in industrial application context. The book includes the carefully selected best contributions to APCASE 2014 the 2nd Asia Pacific Conference on Computer Aided System Engineering held February 10-12 2014 in South Kuta Bali Indonesia. The book consists of four main parts that cover data oriented engineering science research in a wide range of applications computational models and knowledge discovery communications networks and cloud computing computer based systems and data oriented and software intensive systems

Authenticity of Foods of Plant Origin Konstantinos Kotsanopoulos, 2022-06-15 Food is adulterated to increase profit or due to negligence. Adulteration can compromise food safety and quality and harm consumers. This may undermine consumer trust and the reputation of the food industry. As such it is very important to monitor control and detect adulteration. A number of techniques have been developed for the authentication of food and verifying its quality and associated claims. Foods of plant origin are the source of nutrients for billions of people around the globe. Due to the huge variety of plants and the lack of visual characteristics as a result of processing advanced techniques are required to detect adulteration. This book reviews the latest developments in the field of authenticity of foods of plant origin examining concepts such as traceability and how they are applied to facilitate the support

of claims as well as legislative requirements in the major economies around the world The basic techniques used nowadays in verifying authenticity of these types of foods are reviewed and discussed and their applications are summarized The book also focuses on categories of foods most prone to adulteration attempts due to their characteristics properties and production methods commonly followed thus allowing the reader to more easily identify the chapter that is of interest in each case The book will be of interest to food industrialists chemists quality control scientists and technologists microbiologists analytical chemists and food physical chemists within the food industry It is also aimed at academicians who are interested in the authenticity of foods of plant origin and the advancements in the analytical fields that support relevant legal and marketing requirements

Vibrational Spectroscopy in Diagnosis and Screening Feride Sevencan, Parvez I. Haris, 2012 In recent years there has been a tremendous growth in the use of vibrational spectroscopic methods for diagnosis and screening These applications range from diagnosis of disease states in humans such as cancer to rapid identification and screening of microorganisms The growth in such types of studies has been possible thanks to advances in instrumentation and associated computational and mathematical tools for data processing and analysis This volume of Advances in Biomedical Spectroscopy contains chapters from leading experts who discuss the latest advances in the application of Fourier transform infrared FTIR Near infrared NIR Terahertz and Raman spectroscopy for diagnosis and screening in fields ranging from medicine dentistry forensics and aquatic science Many of the chapters provide information on sample preparation data acquisition and data interpretation that would be particularly valuable for new users of these techniques including established scientists and graduate students in both academia and industry

Plasmonic Biosensors A.B. Dahlin, 2012-01-11 In this book Andreas Dahlin has written a comprehensive and thorough review of plasmonic biosensors that operate by refractometric detection After an introductory chapter on biosensors in which he sets out the concepts of biosensing in its application to such areas as proteomics medical diagnostics and environmental control he undertakes an integrated coverage of surface chemistry surface physics and optics specifically related to the requirements of design of a plasmonic biosensor Sections on nanoparticle plasmons and surface plasmons follow leading to a review of SPR technology for biosensing The optical properties of nanoholes in metal films and other more complicated plasmonic nanostructures are also briefly discussed Later chapters discuss experimental plasmon spectroscopy and spectral analysis while the final sections discuss topics such as sensor response and the extent to which quantitative measurements can be made The book introduces a few relatively controversial opinions on some open questions such as how best to define sensor performance and the practical use of highly miniaturized sensors Each of the chapters is extensively referenced and contains appropriate illustrations The book contains a wealth of information that will be highly beneficial to both existing and new users of refractometric sensing techniques in life science research It will be a valuable resource for post graduate research students academic researchers and those working in industry
