Schore,2006-01-20 Radiotherapy for Head and Neck Cancers Xinyuan Chen,Minglei Kang,Jun-Lin Yi,2025-04-10 Radiotherapy is a crucial treatment modality for head and neck cancers encompassing a range of malignancies in the upper aerodigestive tract Advanced approaches such as intensity modulated radiation therapy IMRT and particle therapy with the emergence of image guided radiation therapy IGRT techniques offer enhanced precision and

improved outcomes Encouragingly combining radiotherapy with chemotherapy has shown promising results in locally advanced cases However the proximity of tumors to critical structures remains challenging to manage acute and late toxicities which demands innovative strategies to reduce radiation related side effects Addressing long term toxicities is an essential research focus with efforts toward adaptive radiotherapy radioprotective agents and other novel treatment techniques These endeavors aim to mitigate radiation induced fibrosis dysphagia dysphonia and secondary malignancies thereby enhancing patients quality of life Moreover advances in multimodal imaging techniques including computed tomography CT magnetic resonance imaging MRI positron emission tomography PET and onboard volumetric image systems have facilitated treatment planning target delineation and response assessment during and after radiotherapy Thus radiotherapy continues to be an integral component in head and neck cancer treatment and ongoing research efforts are directed toward overcoming challenges related to precision toxicities and long term outcomes
