An Efficient Runtime System Combining Dataflow, Multithreading, and Distributed

Shared Memory Markus Leberecht, 1999

Compiling Dataflow Into Threads: Efficient Compiler-controlled

Multithreading for Lenient Parallel Languages University of California, Berkeley. Computer Science Division, Klaus Erik Schaus, 1991. Remote communication is via message sends and split phase memory accesses. Messages and memory replies are received by compiler generated message handlers which rapidly integrate these events with thread scheduling. To compile ID90 for TAM we employ a new parallel intermediate form dual graphs with distinct control and data arcs. This provides a clean framework for partitioning the program into threads scheduling threads and managing registers under asynchronous execution. The compilation process is described and preliminary measurements of the effectiveness of the approach are discussed. Previous to this work execution of Id90 programs was limited to specialized architectures or dataflow graph interpreters.
