Spin Ice Masafumi Udagawa, Ludovic Jaubert, 2021-10-19 This book deals with a new class of magnetic materials spin ice Spin ice has become the canonical example of modern frustrated magnetism where competing interactions between spins set the rules for an emergent magnetostatic gauge field theory Excitations take the form of magnetic monopoles or can condense via a Higgs mechanism Beyond classical spin ice the book describes the new physics emerging when quantum coherence spin liquids photon like excitations and itinerant electrons anomalous Hall effect are included in artificial systems This first book dedicated to spin ice is a review of the current understanding of the field both on the theoretical and experimental levels written by leading experts The book is written in a linear way with very few prerequisites It also contains textbook like descriptions of theoretical methods to help advanced students and researchers to enter the field **Physics Briefs** ,1994

This thesis highlights research explorations in quantum contextuality with photons Quantum contextuality is one of the most intriguing and peculiar predictions of quantum mechanics It is also a cornerstone in modern quantum information science It is the origin of the famous quantum nonlocality and various nonclassical paradoxes It is also a resource for many quantum information processing tasks and even universal quantum computing Therefore the study of quantum contextuality not only advances the comprehension of the foundations of quantum physics but also facilitates the practical applications of quantum information technology In the last fifteen years the study of quantum contextuality has developed from a purely theoretical level to a stage where direct experimental tests become amenable However the experimental research on contextuality at the current stage largely focuses on direct validations of some most famous predictions of contextuality while other forms of contextuality and its practical applications in quantum information science are rarely involved The research in this thesis is committed to bridge this gap from two directions 1 to construct and test stronger forms of contextuality and relieve the requirements of contextuality experiments on experimental platforms and 2 to

explore the connections between contextuality and the other concepts in quantum information science and directly demonstrate the application of contextuality in broader scenarios Specifically the thesis have discussed the research topics about the relationship between quantum contextuality and nonlocality the all versus nothing paradoxes from quantum contextuality the ore and post selection paradoxes from quantum contextuality and the topological protection and braiding dynamics of quantum contextuality in quasiparticle systems *Elements of advanced quantum theory* J. M. Ziman,1969

Quantum Nonlocality and Reality Mary Bell,Shan Gao,2016-09-19 A collaboration between distinguished physicists and philosophers of physics this important anthology surveys the deep implications of Bell s nonlocality theorem Quantum Systems under Gravitational Time Dilation Magdalena Zych,2018-07-13 This thesis introduces a new theoretical tool to explore the notion of time and temporal order in quantum mechanics the relativistic quantum clock framework It proposes novel thought experiments showing that proper time can display quantum features e g when a clock runs different proper times in superposition The resulting new physical effects can be tested in near future laboratory experiments with atoms molecules and photons as clocks The notion of time holds the key to the regime where quantum theory and general relativity overlap which has not been directly tested yet and remains largely unexplored by the theory The framework also applies to scenarios in which causal relations between events become non classical and which were previously considered impossible to address without refuting quantum theory The relativistic quantum clock framework offers new insights into the foundations of quantum theory and general relativity **The Particle-Wave-Mass Unification** Wim Veegt,2018-07-04 Light has always been my favorite subject in research Already during 30 years I have focussed my subject of research towards light During my research I have developped a new theory of Unification in which the classical approach in Quantum Physics of the Particle Wave Duality has been replaced by the Particle Wave Mass Unification Theory in which the Particle the Wave and the Mass are the 3 aspects of the same Origin This new Unification Theory has been grounded on a historical fundamental mathematical mistake over a 150 years ago in Classical Electromagnetic Field Theory with Impact on General Relativity Quantum Physics and the boundaries of our Universe In this new Unification Theory the 100 year old concept in Quantum Physics of the Particle Wave duality has been be replaced by a Unification in which Particles Waves and Mass are the 3 aspects of the same Origin The Origin of Matter The Origin of this world the Origin of this Universe In the classical Wave Particle duality the mass of an elementary particle has been divided by a De Broglie Wave probability wave material wave which is a solution of the Schr dinger Wave Equation The mass of an electron in a spherical orbit in the Hydrogen Atom is divided by a spherical probability wave function corresponding to the mathematical solution of the wave equation In this new Unification Theory the Particle the Wave and the Mass become the 3 aspects of the same origin A concept in which probability does not exist anymore The famous 1927 Solvay Conference was considered a turning point in the world of Physics The scientific realists like Albert Einstein had lost and the instrumentalists like Niels Bohr had won the fundamental

conflict Since then Physics has followed the path of the instrumentalists in which Quantum Physics has been determined by the concept of Elementary Particles and Probability Waves When you read my book it is very likely that the world of Physics is still very calm Like in the early morning just when the sun rises You feel peace and the birds start to wake up and you hear the first sounds breaking the silence of the night The sounds of joy the sounds of happiness the sounds of peace But it is the morning of the great battle The battle in physics Still everybody is asleep There is no sign of aggression But soon the armies will rise and the battle will be dark and merciless Because there is so much to lose And what is there to gain Physics has taken over Religion Physics has replaced the God of Love by the God of the Dice In Quantum Physics the magicians wave like Harry Potter magicians with their wands and speak out not understandable spells and create new formulas new elementary particles which need so much more money to investigate Physics has taken over the immense donations which were given in the past to the churches and which are given now in immense amounts in the form of worldwide funding to high energy accelerators like CERN But the war is coming And this book is written in the darkest hours of the night and is presented in the morning just when the sun is rising and just before the war is starting And the war will be merciless Because there is so much to lose It will be the war between Light and Darkness The war between Freedom and Slavery The war between Probability and Light And the empires of physics will ignore what is coming They will look deep into their books with magic spells and they do not see that the war is coming Because they do not see what they do not want to see The new theory presented in this book will break patterns will break believes and will break power But that will not happen until the war has started and the Empire of Physics will strike back Because there is so much to lose Because this theory will break patterns in thinking it is not possible to avoid the old patterns And it is not possible to avoid the old equations and to avoid the old theories and to avoid the old spells In the ancient Greece philosophers like Plato were already discussing the concept of matter build out of particles Called a tomos atom by Democritus and means not dividable And since then the concept of the atom has never left the human mind This new theory will break with the ancient concepts over more than 2000 years old This theory is already spreading over the internet like an indestructible bug And when the morning rises Physics cannot deny anymore the question Is Physics following the right path of human logic or is Physics a mind blowing expensive trip in the non existing worlds of illusions
